SMART LIVING

Light makes a difference. To itself, us as people and our view of the world we live in.

The combination of LEDs and new digital technologies opens up a multitude of possibilities for better quality of light and life.

The smallest designs combined with the option for connection to digital building control systems set new standards in lighting technology. They turn system solutions from OLIGO into creative tools for modern lighting planning.

We hope you enjoy discovering the possibilities.

OLIGO INDUSTRIAL AND ARTISAN.

OLIGO IS ARTISAN

We have been manufacturing high quality luminaires for living spaces and the select shop and property market since 1987. With our multi-award winning single luminaires and track systems, as well as made-to-measure lighting concepts, we have an appropriate solution for every requirement.

We are creative lighting designers, and are committed to providing excellent workmanship and reliable quality.

OLIGO IS INDUSTRIAL

With around 150 experts, two production sites and state-of-the-art technology, we make precisely manufactured luminaires possible, even in serial production. As a result, we offer our partners and customers all the benefits of industrial production such as consistent functional quality, constant operability and long-lasting lighting technology.

Continual quality assurance is a prerequisite for maintaining our standards: from supplier management through to production and technology monitoring in the factory.

OLIGO IS "MADE IN GERMANY" IN THE BEST SENSE

We design, develop and manufacture OLIGO luminaires with the highest quality requirements entirely in Germany.

Regardless of whether its batch or serial production, we always place our trust in our close and long-term collaboration with specialist partners – tailor-made solutions from expert operations and service providers in the region who provide outstanding support for our product ideas in design and technology.

WE ARE THERE FOR YOU PERSONALLY.

SERVICE IS PARAMOUNT FOR US

Our offering for specialist retailers, planners, architects and installers begins with high quality single luminaires and stretches through to professional lighting advice.

You can get answers to technical questions about our luminaires in our service centre. For us, responsibility for our products does not end with installation. An extensive stock of spare parts provides you with assurance that your OLIGO lights can be returned to perfect working order even after many years of use.

OUR OFFERING FOR LIGHTING PLANNERS AND ARCHITECTS

Whether it's living spaces, office spaces or commercial premises – their effect is substantially determined by the lighting. The wide variety of options from LED lighting technology and innovative operating concepts are making lighting planning increasingly challenging.

We support our customers and partners right from the planning phase with lighting technology expertise and digital planning tools, and we offer professionally planned solutions for almost all interior lighting requirements. A team of experienced sales representatives and lighting planners are available to you for individual advice.

KNOWING WHAT IS IMPORTANT.

WELCOME TO THE OLIGO LIGHTORIAL

Are you a specialist retailer, lighting planner or electrician? In our training, we offer things worth knowing about lighting technology and lighting systems – underpinned with theory, applied practically and taught by experienced professionals. We deliberately provide training free of charge and in small groups of up to six participants.

OLIGO training courses take place in our Lightorial in Sankt Augustin and also, upon request, at our specialist retailers' sites. Your OLIGO sales contact person will be happy to help you arrange an appointment.

OLIGO Lichttechnik GmbH
Lightorial
Tannenweg 1
53757 Sankt Augustin
GERMANY

Tel.: +49 2241 8958 - 429
eMail: lightorial@oligo.de

Do you have a training requirement which is not yet on our programme? We look forward to receiving your suggestions and are happy to discuss your themes.

OLIGO Showroom

FEEL THE LIGHT EXPERIENCE OLIGO LIVE.

VISIT US IN OUR SHOWROOMS AND POP-UP STORES

In our showrooms, you can obtain comprehensive information about our range of products and experience the optical and material quality of our luminaires for yourself. Among other places, we present our luminaires at our headquarters in Sankt Augustin near Bonn. We request that you make an appointment in advance so that we are able to provide you with individual advice.

In temporary pop-up stores at varying design hotspots in Germany, we present single luminaires for examination and picking up for a limited time. A current overview with addresses can be found at www.oligo.de.

CONCEPT GALLERY – CONCEPTS FOR LIGHT AND SPACE

The concept gallery collects the major furnishing themes of floor, wall, ceiling and light into a comprehensive design concept and is a recommended port of call for planners, developers and lighting enthusiasts. Together with various brand partners, we present light and luminaires in combination with exquisite interior design.

Events and seminars make the concept gallery meeting points for the local lighting and architecture scene. At regular intervals, we, together with our brand partners, invite you to an exchange of ideas or project presentation, a get together or even for excursions.

Concept Gallery Düsseldorf

OLIGO INTERNATIONAL SALES

Are you an architect, interior designer or lighting planner and want to be informed about the concept gallery events? Write to us or give us a call, we will be happy to provide information about planned topics and dates.

Outside Germany, we work with various distribution partners. Find your nearest dealer using the dealer search on our service page at www.oligo.de.

QUALITY THAT YOU CAN
SEE AND FEEL: IN EACH AND
EVERY PRODUCT.

OUR IDEA OF GOOD LIGHT IS THE COMBINATION OF DESIGN, FUNCTION AND QUALITY.

The homogeneous fusion of design and functionality, taking the highest quality standards into account, is a particular feature of OLIGO luminaires.

All OLIGO luminaires are designed by our development team at the Hennef site. In the design and engineering phase, we determine essential product factors such as light output, range of functions, thermal management or area of application and thus directly influence the quality and longevity of our products.

We also make decisions with regard to the components used, the choice of materials and the finishing with great care.

Our preferred material is aluminium. We achieve precise edges and an excellent surface finish in all parts through elaborate processing with exact turning and milling grades. High quality surface finishes, such as polished chrome surfaces or extensive anodic oxidation for example, give our luminaires a finish which is as unique as it is durable.

We also apply the highest quality standards when purchasing LED components. Each luminaire is equipped with LED modules developed in-house in order to be able to optimally balance the light scene and the light output with one another. We thus achieve a homogeneous light output across the entire luminaire surface.

In our optical systems, we use high quality glass lenses and never plastic lenses. Durable materials such as glass and aluminium make each luminaire a long-lasting fixture.

TRACK SYSTEMS

As many as necessary, as few as possible: when designing track and adapter systems, we concentrate on the smallest, most elegant possible designs. The focus should be on the luminaire and not on the power supply.

SMART.IQ

Intelligence with a system: still easy to integrate into the lighting system retroactively, wireless adapters developed in-house bring intelligence into play. In the blink of an eye, they transform the track system into a smart home solution and allow the system luminaires to be controlled digitally.

ADAPTERS

Perfectly coordinated with our track systems: adapters from OLIGO are not only designed precisely for the particular track system, they can also be locked without any tools. This ensures an optimal power supply to the luminaire and quick installation. Intelligent anti-rotation protection guarantees additional security.

LED MODULES

Guaranteed constant light quality: the lighting properties of the LEDs vary in terms of colour and brightness due to production factors. During the course of consistent quality testing, we are continually ensuring that only LEDs with identical binning (so identical brightness and light colour) are used.

REFLECTORS, OPTICAL LENSES AND PRISMS: REFINEMENTS ON PRECISE LIGHTING CONTROL.

In order to meet the high expectations for modern living space and property lighting, OLIGO has developed a range of LED luminaires with a wide variety of light distribution characteristics. It ranges from directed spotlights through to diffuse room lights and is characterised by excellent light scenes.

Light is omnipresent but hard to grasp. – Or is it? With the right know-how, it can be directed, focused, filtered.

Our works begins with the idea of a well designed luminaire. Only then do we bring light scene and luminaire together in a multi-phase development process. Here, we use quality lenses which are also used, for example, in the automotive industry and aviation. Our aim is to achieve a realisation of the intended light distribution which is as excellent as it is efficient.

REFLECTORS – COUNTLESS FACETS FOR BRILLIANT LIGHT

The light is directed into the room in a controlled manner via reflectors. They are principally used for designing system spotlights and have many benefits in combinations with LEDs.

Finding the optimal reflector for luminaires with a small structural form isn't easy. In order to achieve the highest level of efficiency, the design of the reflector needs to be coordinated with the physical and photometric properties of the LED light source. At the same time, the thermal properties of the luminaire body need to be taken into account. With individually calculated, highly efficient reflectors, we achieve almost complete reflection of the light with exact, almost lossless light control.

OPTICAL LENSES – TRANSPARENT PRECISION

Material and manufacturing processes determine the quality of an optical lens. Cheap plastic lenses project colour fringes at the edges of the cone of light, create turbulent light scenes and have only limited resistance to ageing.

High quality glass lenses, on the other hand, are free from air pockets, precisely formed, polished and centred. That's why we use quality lenses in our luminaires with lens technology, similar to those which are used in measurement technology or microscopy. They ensure a high degree of transmission and allow for exact control of the light spectrum across the entire service life of the luminaire.

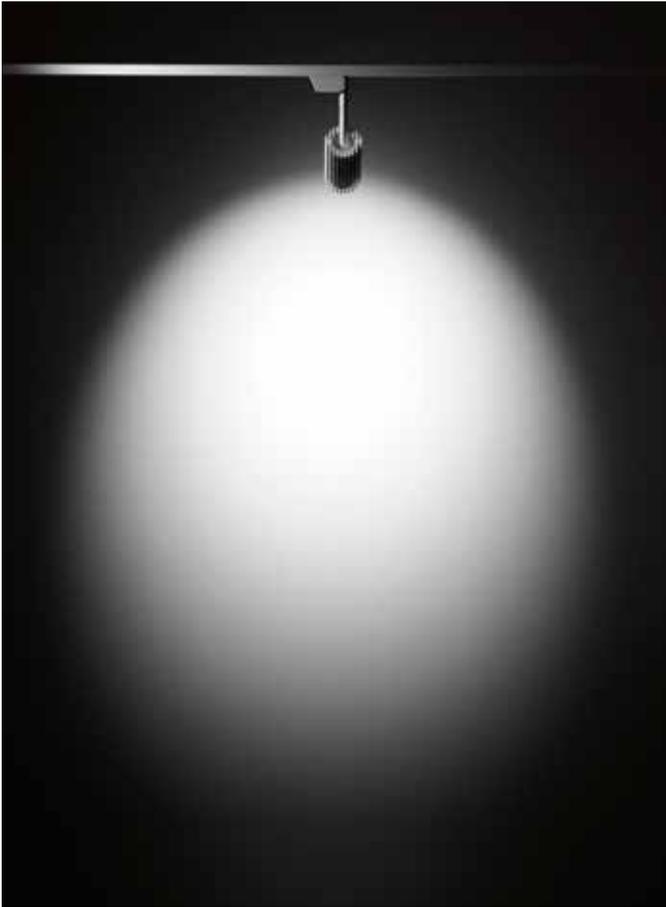

In many of the LED luminaires from OLIGO, the optical lenses have a micro satin finish on the back. This fine texture, coordinated individually with the light source, causes further homogenisation of the light scene with excellent colour mixing. The gently fading light-dark border and the absence of any corona formation at the edge of the cone of light are an unmistakable quality criterion for good light.

PRISMATIC LENSES – SHEER SHINE

Room lights and single luminaires from OLIGO are equipped with high quality prismatic lenses. They reduce the glare of the light source and distribute the light evenly across the breadth.

Quality and purity of the acrylic glass determine the quality of the light scene. Through precise calculation and hot stamping, prismatic structures which combine precise light control functions with the greatest possible efficiency can be created. Carefully calculated, each luminaire receives its individual interpretation in the light scene.

As a fortuitous side effect, prismatic lenses have high decorative value thanks to their diamond-like sparkle which we like to pick up and integrate selectively into the design of our luminaires.

FROM MATT TO GLOSSY – OUR COLOURS AND SURFACES.

ANODISED SURFACES

The process of anodising surfaces originated from protection against corrosion, but by now it has also established itself for the finishing of decorative surfaces. Through anodic oxidation, the work piece is given a protective oxidic layer just a few micrometres thick. This is formed through conversion of the upper metal layer. As a result, polished work pieces for which the surface finish must be retained have to be anodised particularly carefully.

BRUSHED ALUMINIUM

A brushed surface can be produced on a variety of pretreated aluminium work pieces. Brushes of different rigidity and thickness are used depending on the hardness of the material. The art is in guiding the work piece evenly onto the brushes so that it results in an even grinding pattern. For an optimal result, the operation must be completed in a single stroke.

POWDERED SURFACES

Powder coating is a tried and tested form of tempering for metal surfaces which was developed in the late 60s from the varnishing processes which were usual at the time. Typical surfaces for powder coating are steel, galvanised steel and aluminium. The process occurs automatically and is also used in car manufacturing to some extent. It guarantees evenly coloured, durable surfaces with a homogeneous surface texture.

POLISHED CHROME SURFACES

The production of a perfectly shiny chrome surface requires at least five work processes. In various steps, the blank is polished, copper-plated, polished again, then nickel-plated and finally chrome-plated. Here, the shine is generated not by the thickness of the chrome layer applied, but by the nickel layer underneath. Shiny surfaces can also be produced by polishing metals.

THE LED IS LIKE A RAW DIAMOND. ONLY THROUGH COMBINATION WITH HIGHLY PRECISE LENSES, COORDINATED THERMAL MANAGEMENT AND INTELLIGENT ELECTRONICS DOES IT BECOME A HIGH QUALITY LIGHTING TOOL.

LED – INNOVATIVE TECHNOLOGY, INTELLIGENTLY DESIGNED.

The breakneck pace of progress for LED technology has not let up to date. By now, we can no longer imagine living spaces in a modern design without the use of LEDs. The new image has revolutionised the luminaire market as a result, and makes it necessary for manufacturers and buyers of high quality, innovative luminaires to grapple with this development.

LIGHT COLOUR / COLOUR TEMPERATURE

In LED technology, the colour temperature is just as important as the thematically related white balance in digital photography. Ultimately, the thematic background is identical and can most easily be explained through the observation of nature: the sunlight is influenced by a variety of factors so the eye perceives a significantly warmer shade during a sunset than under the brilliant midday sun.

The colour temperature is measured in kelvin (K) – the higher the value, the colder (more blue) the light is. We therefore talk about warm and cold light. However, what is perceived to be pleasant in nature generally does not meet the needs of the private living area. “Cold” light from approx. 5,400 k is considered to be unpleasant in the living area. On the other hand a “warm” 2,700 – 3,000 k acts as a “feel-good colour temperature”. However, there are definitely areas of application, such as in the office or in the food trade, in which completely different colour temperatures are desired or required.

COLOUR REPRODUCTION INDEX

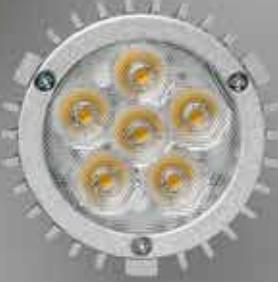

All lamp technologies (e.g. incandescent lamps, fluorescent lamps or halogen lamps) have different qualities with regard to the colour reproduction. This means that colours are not equally easy to recognise with every type of lighting. At 2,700 kelvin, incandescent lamps have a colour reproduction index or colour rendering index (CRI) of 100. High quality LEDs currently achieve values of between 80 and 97 CRI. Depending on the area of application, such as in museums or fashion stores for example, a higher colour reproduction index is absolutely necessary.

TEMPERATURE MANAGEMENT

Contrary to popular belief, temperature plays an exceptionally important role in LEDs. Although they don't get as hot as incandescent lamps, the operating temperature is still crucial for the service life and other qualitative factors of the LED. A high quality LED luminaire therefore has sophisticated temperature management. Extensive testing and development processes are a permanent part of the development service at OLIGO in order to design reliable luminaires. Instead of relying on the massive dimensions of the luminaire body to take care of the necessary temperature regulation, we make use of all of our expertise in order to achieve or exceed comparable light outputs and quality in subtle and delicate sizes.

SERVICE LIFE

Taking optimal temperature management into account, you can assume an average service life of up to 50,000 operating hours for a modern LED. This corresponds to a service life of 17 years with a daily operating period of 8 hours. Because of this, LEDs are often permanently built into the luminaires and do not have a lamp socket which allows the user to change the lamp. Alongside the combination of product design and thermal management in product development, the careful selection of the optimal LED is our commitment to long-lasting and consistent light quality. The same applies for LED lamps which are now available for standard models – so-called LED retrofits.

LED RETROFIT LAMPS REVIEWED IN DETAIL.

The energy-efficient replacement for a conventional lamp is called LED retrofit. This lamp type has gained extensive importance as a result of the ban on incandescent light lamps. Even the classic track and cable systems from OLIGO can be fitted with energy-saving retrofits.

QUALITY ALSO COUNTS FOR LAMPS

If you want to convert an existing lighting system to LED retrofits, we recommend using exclusively high quality products from well-known manufacturers.

There are cheap and often substandard products available on the market which do not allow for objective comparison with branded goods as a result of inadequate or even missing technical information.

For LED retrofits, indications with regard to light colour, service life and replacement capacity should be considered to be average information. Particularly with substandard product quality, the tolerances are often wide apart since comprehensive examination and limitation of the products has been foregone in favour of the price. This can mean that one and the same product have different lighting effects which is particularly noticeable when multiple lamps are operated at the same time.

ENERGY EFFICIENCY CLASSES

In order to describe the efficiency of a lamp, there is a simple classification: the more lumen a lamp emits per watt of power, the more efficiently it converts the energy input into visible light.

As for large household appliances, EU 2014 also introduced the energy label as a labelling requirement for lamps. Thereby, lamps can be divided into the different energy classes. Unlike for fridges, for example, there is no class which is more efficient than the efficiency class A++ for lamps.

In the discussion of energy efficiency and environmental consciousness, the actual effect of light should not be neglected since the right light has a significant effect on general well-being. Cost awareness for consumption and the desired lighting mood should therefore be evaluated individually and the “right” light should always be understood to be an individual decision. For this reason, objective advice from experts is always recommended before the actual implementation of a lighting solution.

WHAT SHOULD BE CONSIDERED FOR A RETROFIT CONVERSION

1. Does the new lamp have the same luminous flux (lumen) and the same beam angle as the model to be replaced?
2. Is the new lamp suitable for the existing fitting and for the shape of the luminaire?
3. Are the accessory parts suitable for the LED retrofit lamp or might there be temperature problems?
4. If the existing luminaires are operated using a dimmer then care should be taken to ensure that the retrofit lamps are also compatible with the dimmer.
5. If a conventional low voltage system is being converted then the transformer must be replaced where applicable.
6. LED retrofit lamps are almost always designed for “free” installation. An enclosed luminaire housing can significantly reduce the specified service life in most cases.

THE LIGHT OF TOMORROW CAN DO MORE THAN JUST ILLUMINATE. INTELLIGENTLY NETWORKED AND DIGITALLY CONTROLLABLE, IT ENSURES WELL-BEING, APPEAL OR CONCENTRATION AND MAKES AN EFFICIENT CONTRIBUTION TO THE MANAGEMENT OF BUILDINGS.

SMART.IQ

FEEL WHAT LIGHT CAN DO!

Like no other light source before, the LED can be combined with the communication and control possibilities of the Internet thanks to its semiconductor technology and changes our handling of light. Discover a new world of intelligent lighting possibilities. Create your own personal light with the touch of a fingertip.

INTELLIGENT LIGHTING TECHNOLOGY FOR MORE LIGHTING CONVENIENCE

At home or in a commercial environment: smart system solutions and options for individual lighting control pave the way for more lighting convenience. With the newly developed SMART.IQ wireless components, OLIGO presents small format system modules which pack a punch. Easy to integrate, they bring intelligence into play and transform the 24 V LED lighting system into a smart home solution in the blink of an eye.

In order to allow for the broadest possible field of application in combination with other smart home compatible luminaires and appliances, OLIGO relies on strong partners in digital lighting control and offers SMART.IQ wireless components for two common wireless technologies. The components support the wireless solution from the Finnish manufacturer Casambi or the common HomeMatic home control system from the German manufacturer eQ-3.

CASAMBI

SIMPLY CLEVER

Casambi is an easy-to-integrate, free software for the mobile control of single luminaires and lighting systems. It is characterised by easy integration, simple technical design, wireless installation and intuitive control via a smartphone or tablet.

Even existing lighting units and conventional light switches can be integrated into the smart lighting control using a switch module which can be retrofitted. Casambi is therefore particularly suitable for retrofitting in existing buildings.

HomeMatic

THE SMART COMPLETE SOLUTION

HomeMatic is a cross-system smart home system for wireless intelligent building control. The system can be used to realise not just lighting, but also building surveillance functions, for example. It is available for retrofitting in the home as well as for new builds.

The individual connected devices such as blinds, heating, access control and weather sensors can be conveniently controlled using a smartphone or tablet, via a built-in centre, by remote control or using the PC software. HomeMatic is a product from the German manufacturer eQ-3.

PROFESSIONALLY SHOWCASING ROOMS WITH DALI.

DALI is the best known digital, standardised interface for controlling lighting technology control units. Originally designed for dimming fluorescent lamps, the system has developed into an all-round tool for professional lighting moods.

DALI – DIGITAL ADDRESSABLE LIGHTING INTERFACE

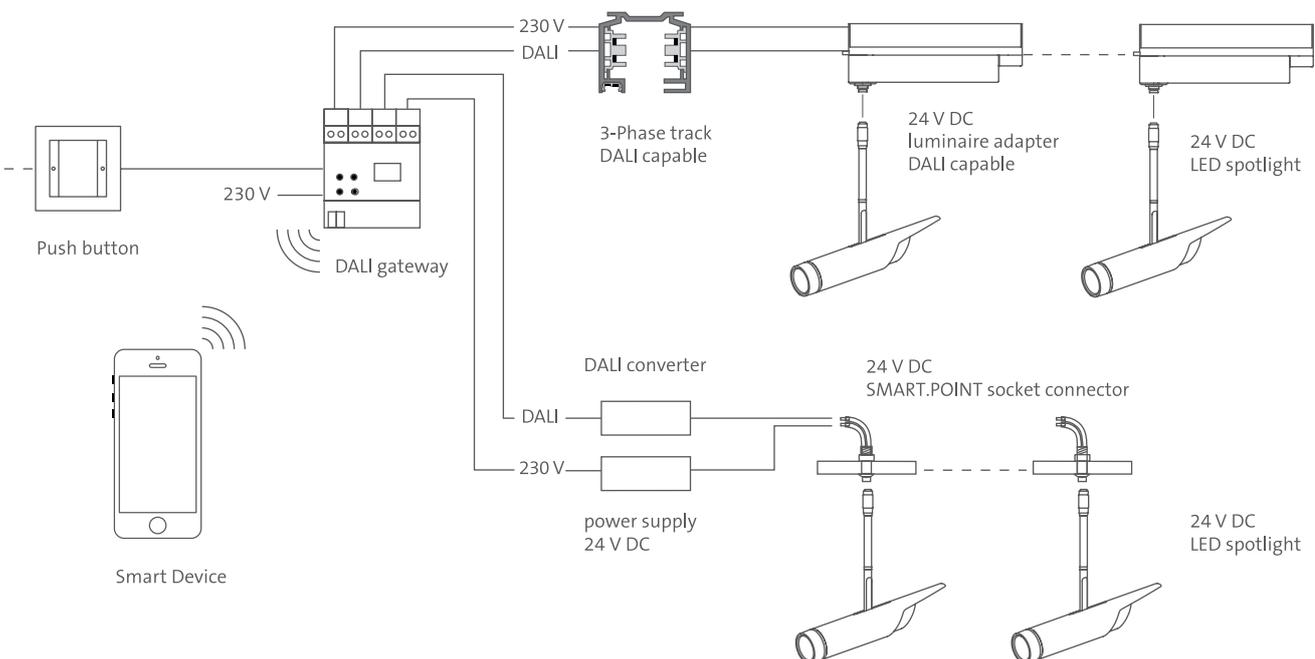

As a digital, open standard, DALI offers a multitude of products and areas of application which have distributed intelligence and automated functions such as individual status reporting or system monitoring.

Interfaces with complex systems for building systems technology such as KNX, LON or DMX allow DALI components to be combined with existing building control technology.

DALI-COMPATIBLE LED SYSTEM LUMINAIRES

With the new 24 volt LED system luminaires, OLIGO offers the option of integrating luminaires into the building automation system by means of DALI-compatible components. A three-pole pin with integrated signal pole allows for the configuration of lighting networks for larger commercial applications, or stand-alone systems for smaller installations.

The energy-efficient renovation of existing three-phase lighting systems in property can also be carried out with 24 volt LED system luminaires.

Example of a DALI application with individual and group control

LESS IS MORE IS NOT ENOUGH.

CONCENTRATION ON WHAT'S IMPORTANT

OLIGO comes from the Greek "oligós" and means "less". This central principle of a reduced design vocabulary defines our design attributes.

We want to showcase design and light with ease: as a glittering experience or in clear practicality, as bright joy or optical magic.

AWARD-WINNING AGAIN AND AGAIN

Concentration on the essential leads to subtle, compact luminaires with impressive light output and lighting technology full of finesse.

The result of the creative work of the OLIGO team, as well as the collaboration with well-known design studios, are lighting technology masterpieces which win recognition again and again.

SMART.LIVING

NEW PRODUCTS 2018

Innovative designs, a long service life and intuitive options for lighting system control make LED luminaires an efficient and decorative highlight in any interior space. Our lighting ideas are sure to inspire you!

RIO and BALINO

LED luminaires for the SMART.TRACK system, with a special system adapter

The RIO and BALINO series of LED luminaires are now available for use with the 24 V SMART.TRACK system. The products are equipped ex works with a special system adapter that is somewhat larger than the standard adapter because it needs to be able to house the LED driver and the control electronics.

The special adapter shape can be used with the SMART.IQ extension. This means that RIO and BALINO can be integrated into the Casambi and HomeMatic lighting control solutions, and can also be dimmed and incorporated into lighting designs just like any other SMART.TRACK luminaire.

The slim RIO luminaires have a special soft touch surface. The surface shimmers in smooth shades depending on the incidence of light. The luminaire is available with a matt finish in white and black.

The small BALINO pendant luminaire stands out through its round and colourful glass shades. An exclusive ice crystal finish in the diamond grey, gold and tobacco models creates a finely textured lighting effect. A fresh orange tone and a classic satin-finish surface are also available.

Further information on the 24 V SMART.TRACK system can be found starting on page 39.

Further information on RIO in combination with SMART.TRACK can be found on page 79; further information on BALINO: page 80.

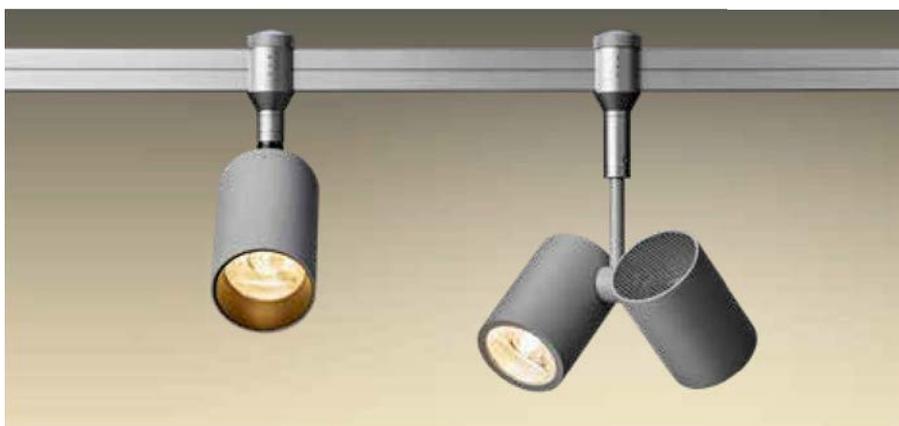

GRACE

LED system luminaire for 24 V systems and CHECK-IN

The timeless GRACE luminaire is considered to be one of the classic decorative pendant luminaires worldwide. The luminaire is ideal for setting the scene at tables and counters. Along with classic surfaces in brushed chrome and aluminium, the GRACE LED version is also available in glossy white and with the new soft touch surfaces. A special procedure is used to apply a shimmering matt finish to the body of the luminaire. The surface shimmers in smooth shades depending on the incidence of light.

The 24 V LED version can be adapted to the following systems: SMART.TRACK (page 81), SMART.POINT (page 119), PHASE (page 187) and SHOP (page 403).

GRACE with high-voltage LEDs can also be used with CHECK-IN (page 241).

WALLEY

CHECK-IN system spotlight with high-voltage LEDs

A minimalist design and structure and impressive lighting performance make the WALLEY spotlight truly special.

The two spotlight heads in the 2-flame variant can be pointed towards each other, which means two different areas can be illuminated simultaneously from one mounting point.

The luminaires can be dimmed externally using many of the latest phase-cut dimmers.

Further information on WALLEY can be found on page 209.

SMART.TRACK

PERFECT LIGHTING, COMPACT DESIGN.

The simplest mechanical design, smallest possible cross section, high quality and at the same time minimalist design – these are just a few of the outstanding features of the SMART.TRACK 24 volt LED track system. The product range consists of spotlights, pendant luminaires and room lights. It offers both elegance and light quality of the highest technical level at the same time.

All luminaires are equipped with the tried and tested plug technology. As a result, the luminaires can be used both in the SMART.TRACK 24 volt LED track system and in the SMART.POINT 24 volt LED spot system.

Different light colours and homogeneous light distribution make the desired individual room atmosphere possible.

The luminaires can be integrated into the common Casambi and HomeMatic smart home systems using SMART.IQ wireless components for digital lighting control. Combinations with controllable single luminaires lead to further lighting design options for smart homes.

SMART.TRACK

INSTALL AND ADAPT EASILY

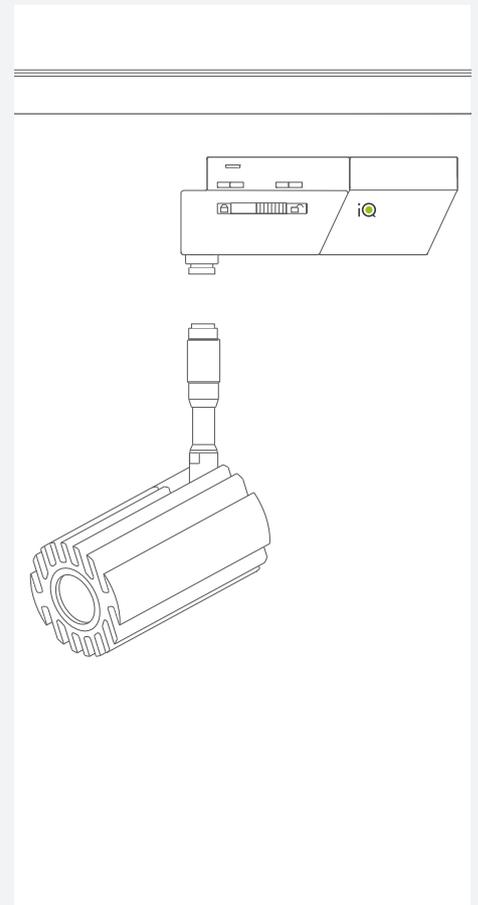

ADVANTAGES AT A GLANCE

- Particularly compact track format: just 17 x 17 mm
- Tracks available in lengths of 500 mm and 1500 mm
- Large systems can be implemented with few connection points
- Wide variety of installation options: ceiling mounting, flush to the ceiling, with supports, on beams
- Wide variety of connector options: I, L, T, X and flex connectors
- Tool-free installation of the track in supports and suspensions
- Tool-free installation of adapters and luminaires
- Live parts with anti-twist protection

ADAPTER

ADAPTER with SMART.IQ WIRELESS ADAPTER

INSTALL EASILY AND SAFELY

24V SMART.POINT spotlights, ambient lights and pendant luminaires are connected quickly and conveniently to the track system using the extremely small adapter. Installation does not require tools. The subtle slider locks the adapter securely to the track and can be released again at any time.

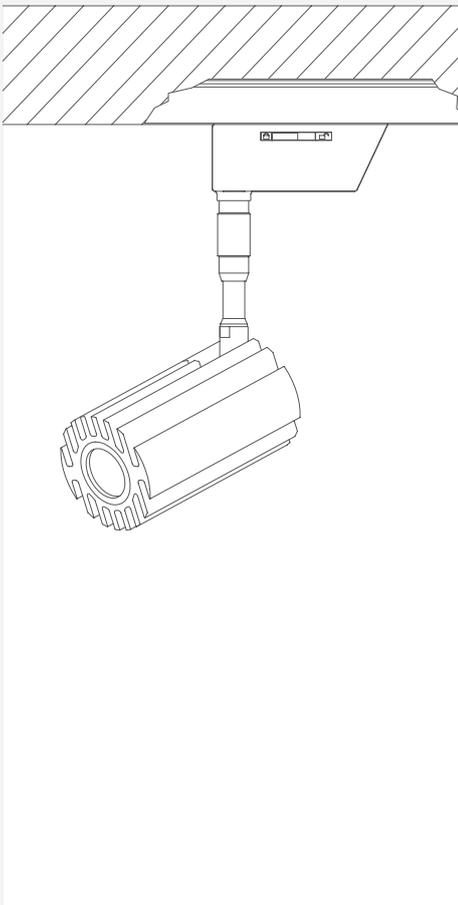

Integrated anti-twist protection in the live components ensures easy and safe installation.

WIRELESS ADAPTER FOR LIGHTING CONTROL

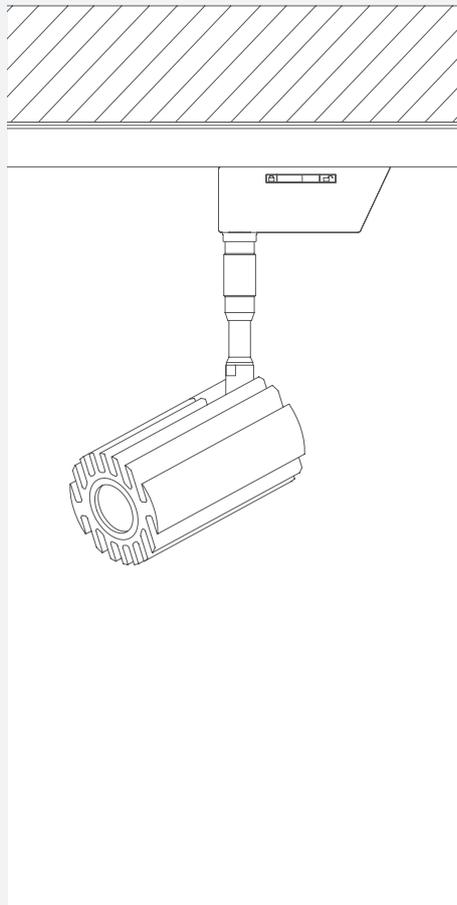

The SMART.IQ wireless adapter, which is easy to integrate retroactively, brings intelligence into play. In the blink of an eye, the SMART.TRACK 24 volt LED track system is transformed into a smart home solution.

The SMART.IQ adapter is simply plugged into the regular luminaire adapter. During commissioning of the system, the spotlight is coupled with the mobile device and establishes a wireless connection.

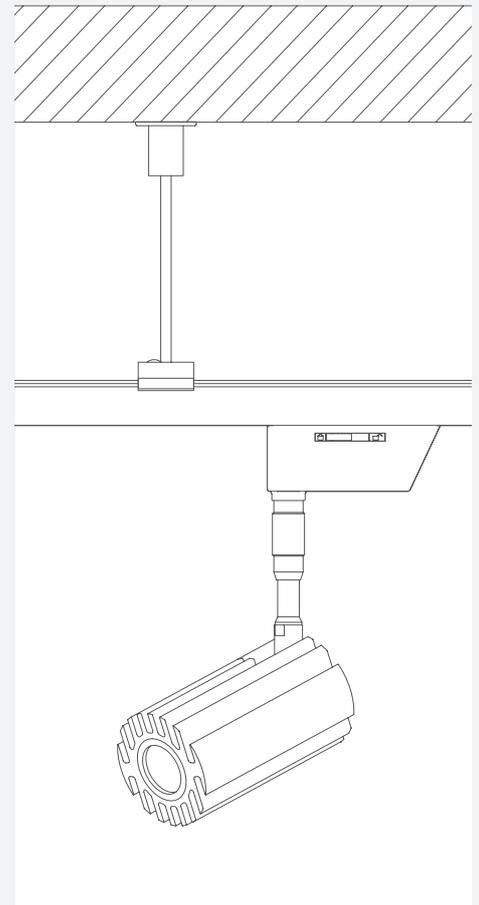

INSTALLATION recessed in the ceiling

INSTALLATION flush with the ceiling

INSTALLATION with supports

FLEXIBLE INSTALLATION OPTIONS

There are a variety of types of installation to choose from for the SMART.TRACK track system. The tracks can be installation recessed into the ceiling, flush with the ceiling, or with supports.

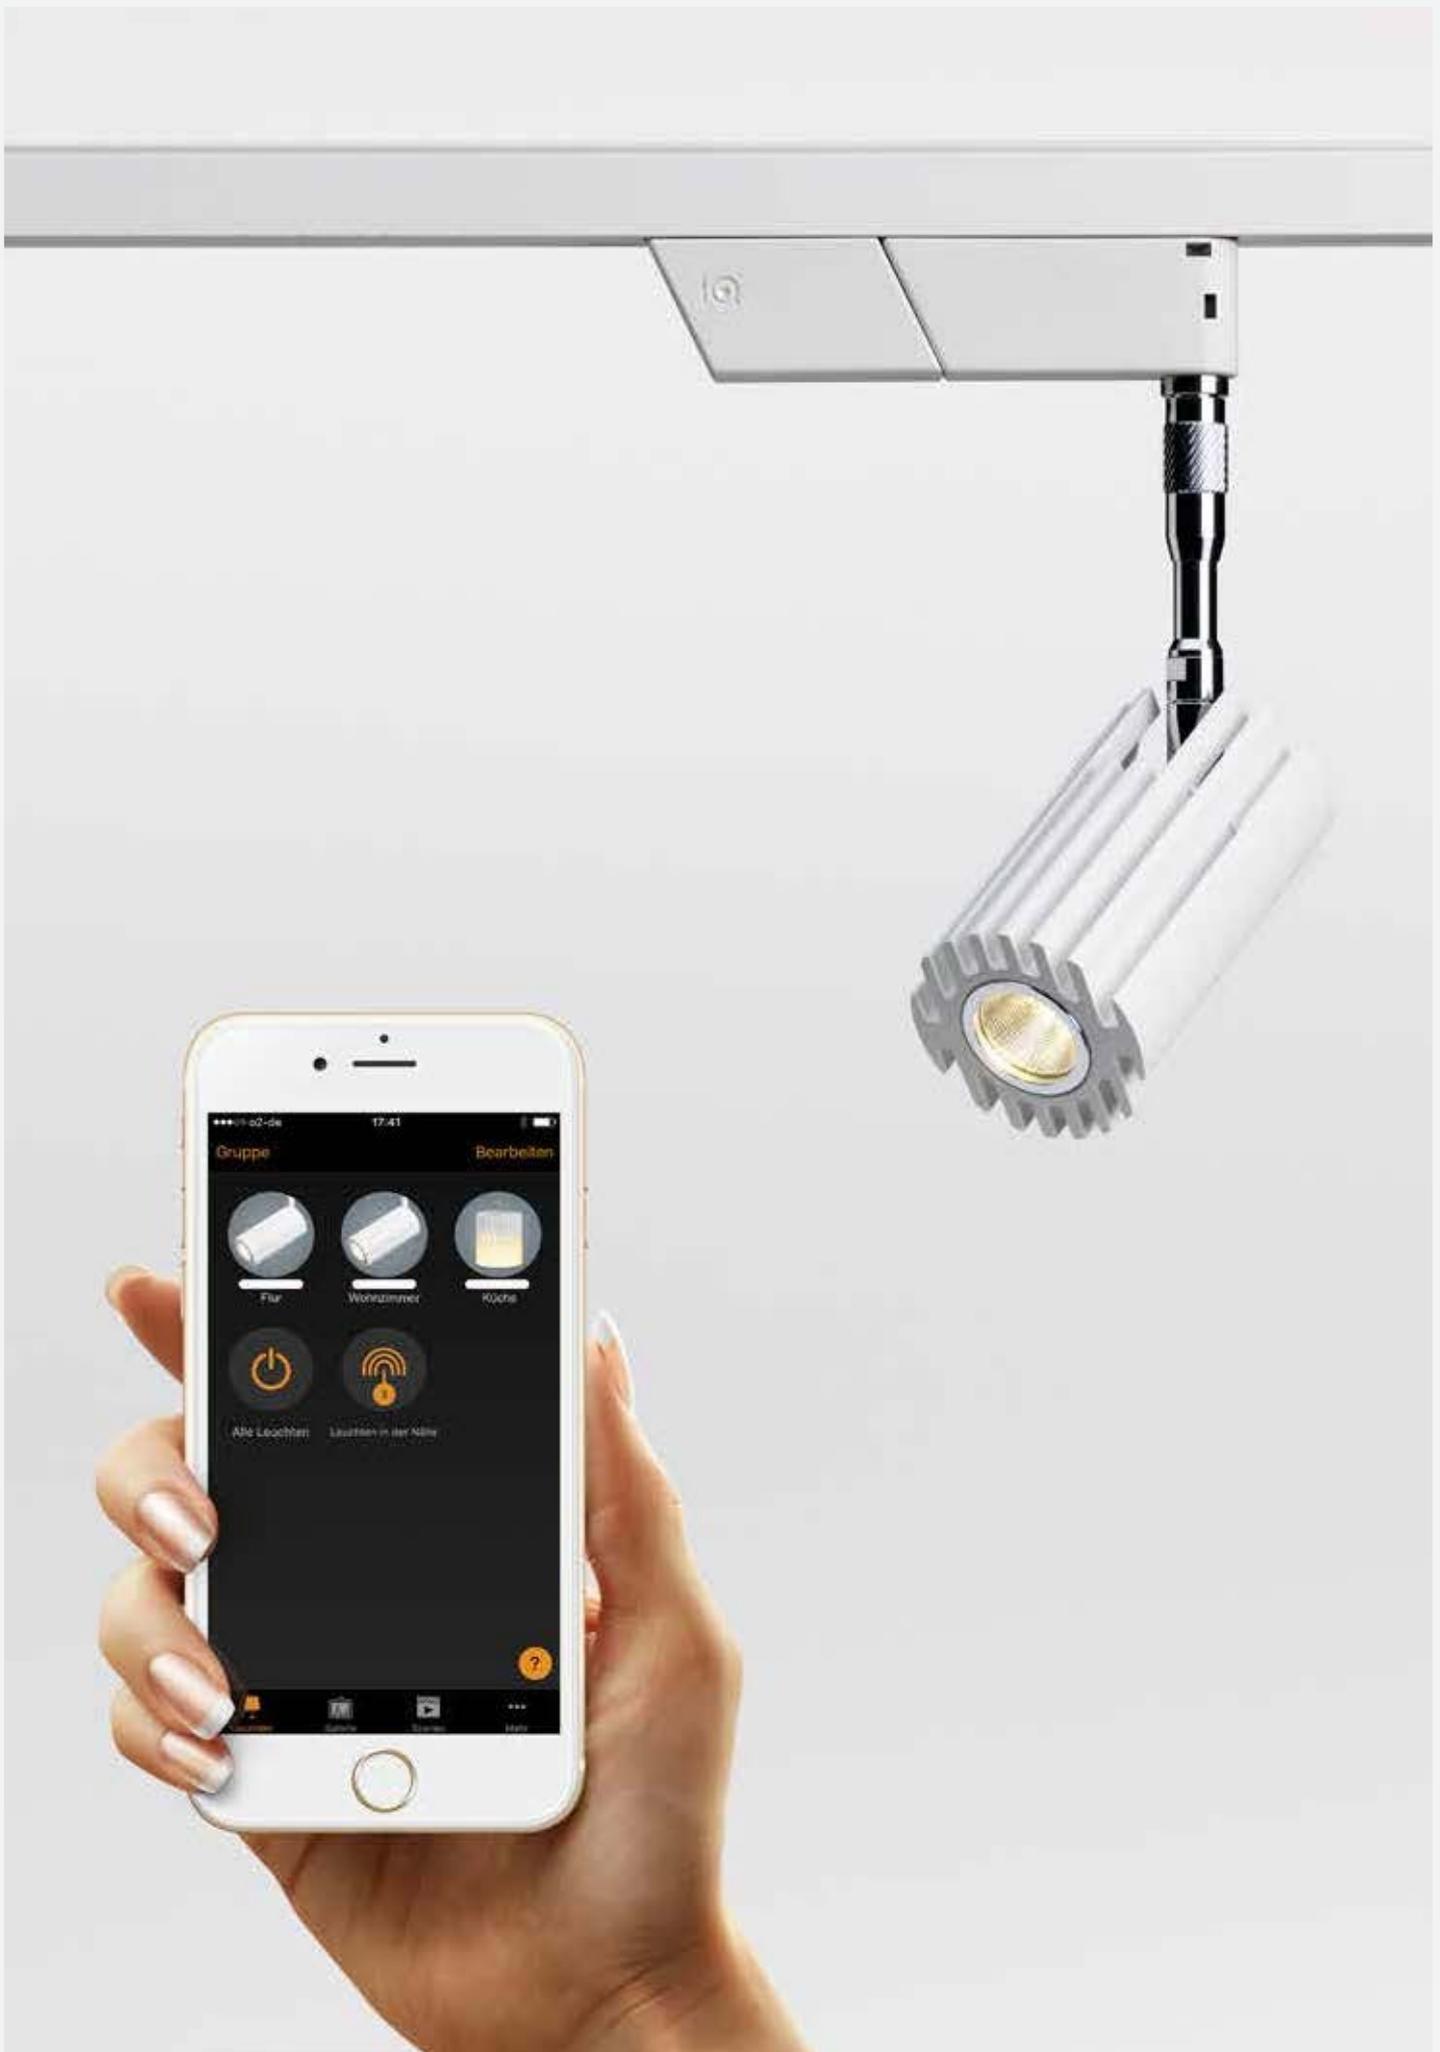

INDIVIDUAL TRACK CONFIGURATIONS

A variety of connection elements such as T and X connectors, for example, allow individual track configurations to be designed. The track elements can be connected with one another almost invisibly using internal track couplings designed in-house.

Thanks to the intelligent design of supports and components, installation can also be done largely without any tools.

PLACE TRACK SUPPORTS ANYWHERE YOU WANT

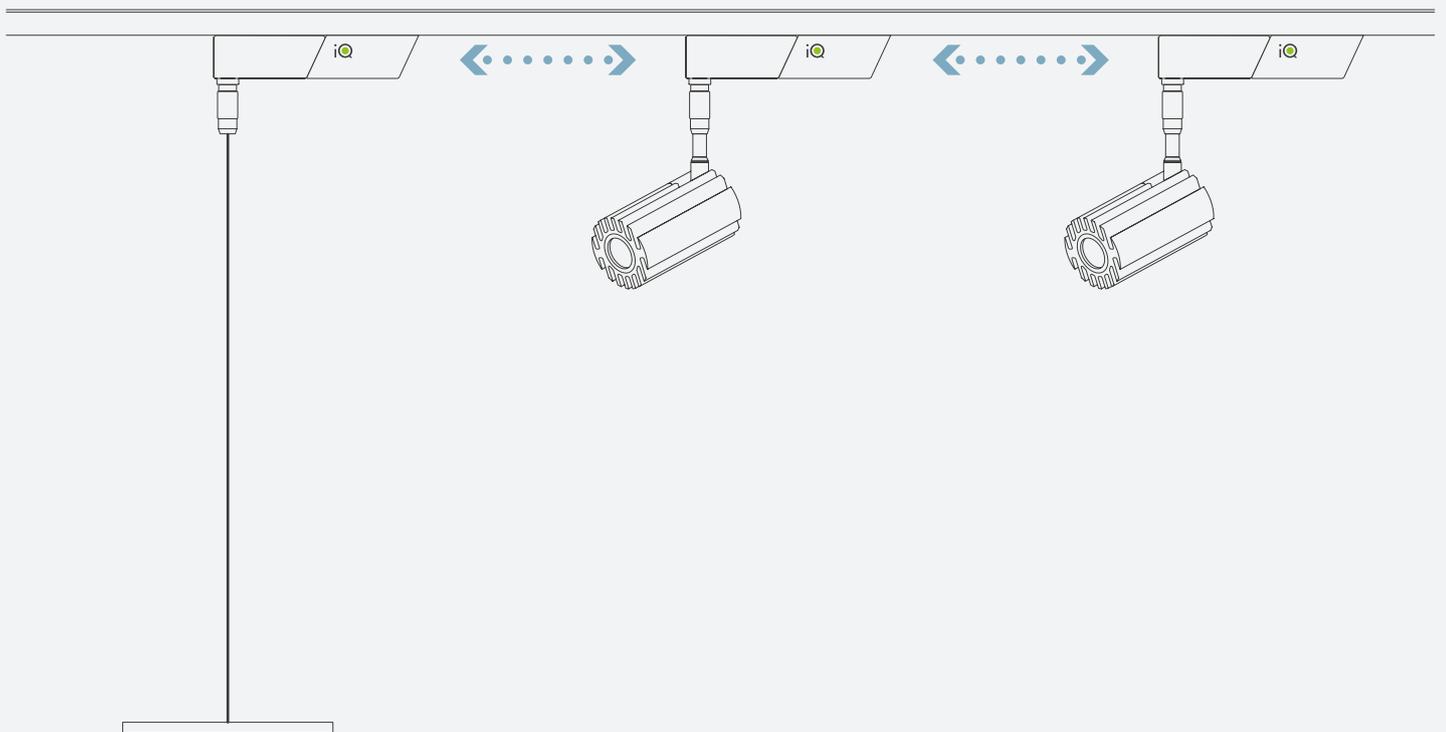

Structural conditions often determine what points on the ceiling a track support can be attached to. The internal track connectors allow for more planning and installation freedom. Regardless of the location of the connector, the points for attachment to the ceiling can be freely determined.

SMART.IQ

DIGITAL LIGHTING CONTROL VIA WIRELESS COMPONENTS

Intelligent solutions for renovation and new builds are more in demand than ever. Particularly when it comes to switching and dimming the lights conveniently. SMART.IQ from OLIGO offers the best conditions for this. Alongside a wide variety of applications, it impresses with simple operation and maximum flexibility.

CASAMBI
HomeMatic

EASY RETROFITTING FOR SMART LIGHT

24 volt LED system luminaires can be integrated into a wireless network using SMART.IQ wireless components and can thus be digitally switched and dimmed.

The user is free to choose whether, at what point in time and to what extent the lighting is integrated into the building automation system. There is a choice between the Bluetooth-based app from Casambi or the wireless-based HomeMatic home control system from the German manufacturer eQ-3 here.

ALWAYS A SECURE CONNECTION

Reliably functioning is the be all and end all of a wireless solution which is safe to use. Both the Casambi application and the HomeMatic application work using bi-directional wireless protocols.

The wireless signal is not just sent from one side, the system is constantly checking whether the receiver has received the wireless signal.

SMART.IQ

in combination with the Casambi wireless solution

SIMPLY CLEVER

Casambi is a free software for the mobile control of single luminaires and lighting systems.

It is characterised by:

- easy integration
- simply technical design
- wireless installation, and
- intuitive control via smartphone or tablet

Even existing lighting units and conventional light switches can be integrated into the mobile lighting control system using a switch module which can be retrofitted. Casambi is therefore particularly suitable for retrofitting in existing buildings.

Thanks to a maximum distance of 50 metres between the modules or the mobile device used as a control, even bigger projects can be realised.

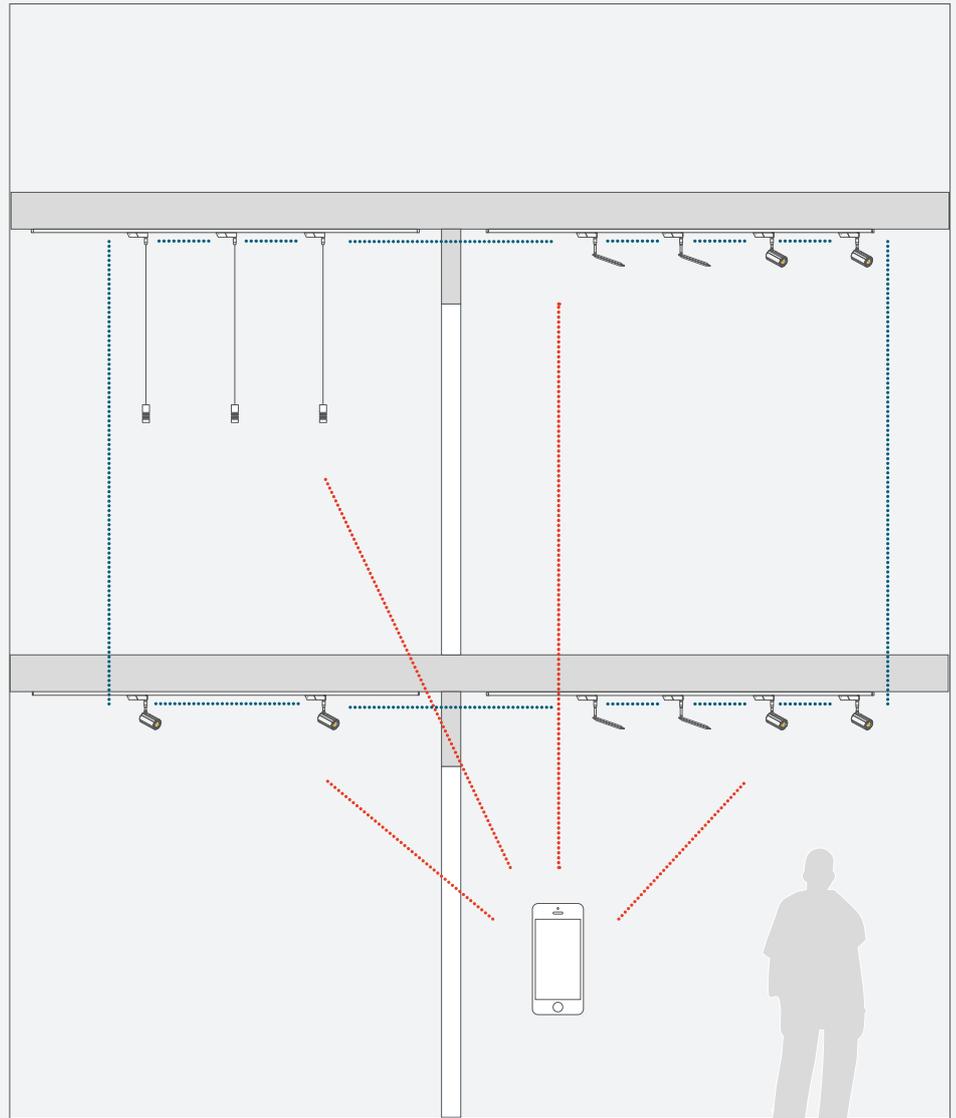

PROVEN TIME AND AGAIN

The software is used by more than 120 companies in the lighting industry and is compatible with products in the Philips Hue range, among others.

It therefore offers end users a convenient, cross-manufacturer lighting control system with just one app.

Detailed information about Casambi can be found at

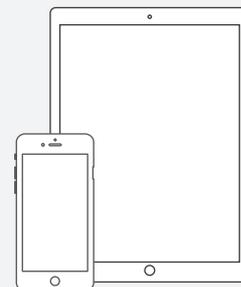

www.casambi.com

Devices for lighting control

Mobile devices

SMART.IQ

in combination with the HomeMatic home control system

SMART HOME VIA WIRELESS

HomeMatic is a cross-system smart home system for wireless intelligent building control. It is available for retrofitting in the home as well as for new builds.

The various connected devices such as blinds and heating, access control, security alarm and weather sensors can be conveniently controlled using a smartphone or tablet, via a built-in centre, by remote control or using the PC software.

The HomeMatic wireless protocol is based on the 868 MHz frequency range. It offers excellent wireless range and has no interference from WiFi or Bluetooth. The wireless signal is secured against external tampering using the AES-128 security technology.

AT HOME AND OUT AND ABOUT

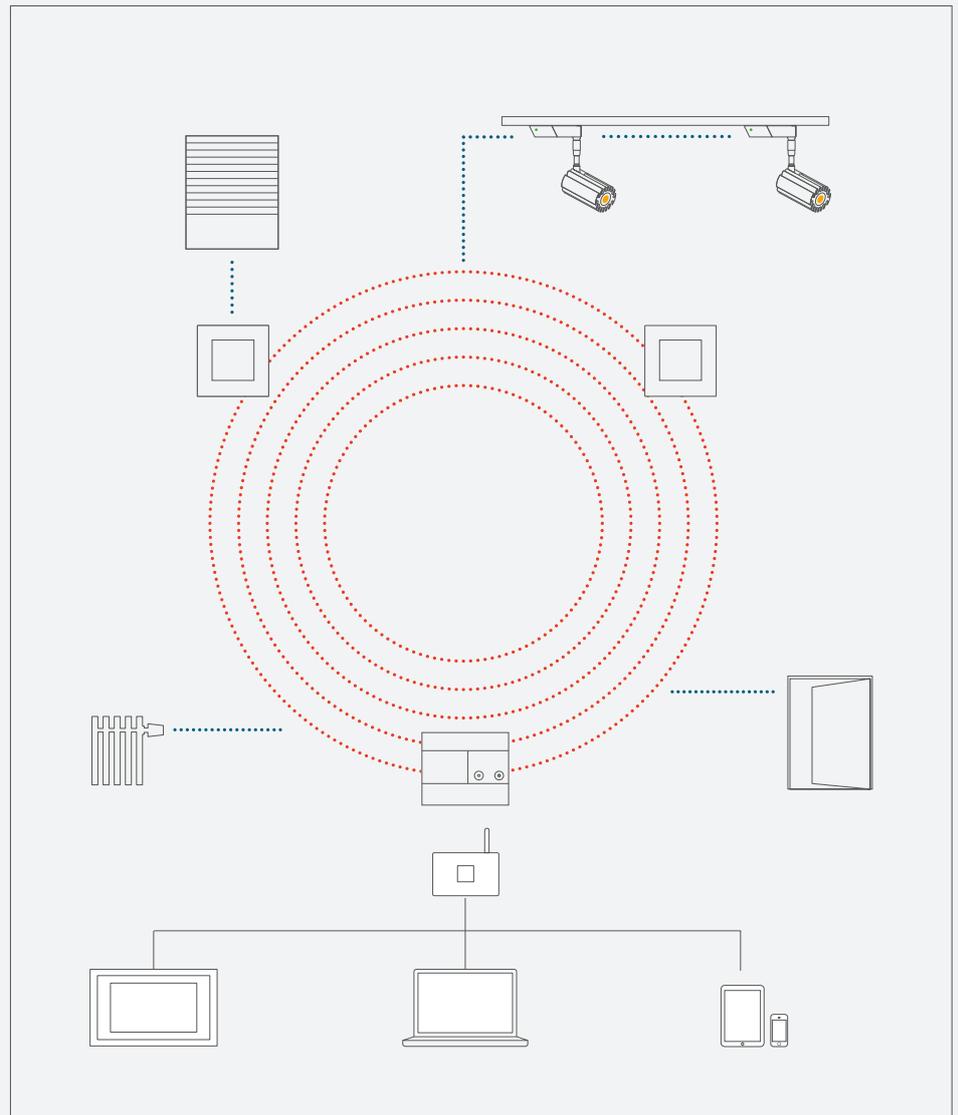

The HomeMatic user interface can be set up using a web browser-based interface and can be controlled both in the local network and over the Internet.

ONE STANDARD, MANY PARTNERS

Thanks to its open interfaces, the system allows for the development of partner solutions in the field of hardware and software. These include, among other things, apps and Cloud services for control via smartphone and tablets which are offered directly by the partners.

Detailed information about HomeMatic can be found at

NEWTON

NEWTON

LED

With a 1,850 lumen luminous flux at a power consumption of 17.8 watts, NEWTON offers a bright, efficient lighting solution for product presentation. The high performance reflector, coordinated in-house with the LED light source shields the spotlight and at the same time defines the softly sketched light scene. The rotatable and swivelling spotlight, with light distribution characteristics of 25° and 45° and light colours of up to 4,000 K, allows for a multitude of options for the modulation of presentation areas.

41 DEGREES

41 DEGREES LED

41 DEGREES is an extraordinary room light which redefines the design of light sources for extensive room lighting. It stands out with its clear, geometric shape. The flat luminaire body rests weightlessly as a concentric circular ring in the room. Its soft, warm white silhouette from the inner surface of the ring disseminates a pleasantly cosy lighting mood.

FLAVIA

FLAVIA / A LITTLE BIT MORE

FLAVIA

LED

Like a suspended work of art made of light, FLAVIA magically draws the eye. Thanks to the optionally open or closed prismatic lens, the actual light source remains invisible and the result is the impression of a glowing forest of leaves. With varying light colours of 2,700 and 3,000 kelvin, the delicate FLAVIA can be used both in private living space and in property.

RIO

LED novelty

Form, colour, materials and light quality – the RIO LED luminaire series combines all the attributes of high-quality luminaire design. RIO luminaires have a special soft-touch surface. The surface shimmers in smooth shades depending on the incidence of light. The luminaire is also available in a black and white matt finish.

COLOURS

BALINO

LED novelty

The small BALINO pendant luminaire stands out through its colourful hand-blown crystal glass. The entire glass body is coloured in the satin-finish and orange models. An exclusive ice crystal finish creates a finely textured lighting effect in the diamond grey, gold and tobacco models. Brilliant illumination underscores the enchanting lighting effect of this high-quality pendant luminaire, which is available with a selection of different caps.

GRACE

LED novelty

The timeless GRACE luminaire is considered to be one of the classic decorative pendant luminaires worldwide. The luminaire is ideal for setting the scene at tables and counters. The two lenticular, satin finished shades ensure even, glare-free illumination.

If the luminaire is integrated into a SMART.IQ application then the digital lighting control replaces the individual lighting control via gesture.

Design: Ralf Keferstein

DECENT

DECENT

LED

DECENT is a flat, subtle LED pendant luminaire in the form of a disc. The evenly flat light radiating downwards is perfectly suited to lighting dining tables or counters. DECENT is controlled touchlessly. A memory function stores the last brightness value selected.

If the luminaire is integrated into a SMART.IQ application then the digital lighting control replaces the individual lighting control via gesture.

A LITTLE BIT

A LITTLE BIT LED

The A LITTLE BIT pendant luminaire offers a highly flexible lighting solution. The elegant luminaire head made from aluminium integrates a lens which can be focused between 20° and 60°. Elegant surfaces made from polished or matt aluminium round out the luminaire profile of A LITTLE BIT. For harmonious light distribution, the high quality lens body has been finished separately with a texture on the inside. The pendant luminaire design is also available as a spot-light for track installation.

The compact adapter can be freely positioned on the SMART.TRACK track and is quick to install.

It is simply connected to the track system through mechanical locking.

Integrated anti-rotation protection ensures installation safety.

Expandable with a SMART.IQ wireless adapter (Casambi or HomeMatic) for integrating the luminaire into the building automation system.

LOCKING MECHANISM

The electrical and mechanical connection between the luminaire adapter and track is created by a small slide lock.

SMART.IQ

WIRELESS COMPONENTS AND ACCESSORIES FOR DIGITAL LIGHTING CONTROL

For wireless control via Casambi or HomeMatic

7. SMART.IQ – CASAMBI

CASAMBI

7.1 WIRELESS ADAPTER

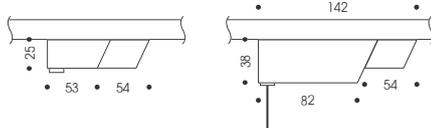

Expansion for luminaire adapters

Allows compatible luminaires to be controlled via smartphone, wireless switch or wireless remote control.

As a cross-manufacturer application, the Casambi app can also be used with luminaires from other manufacturers, such as the Philips Hue, for example. An Internet connection should be available for setting up the system.

SMART.POINT

INTELLIGENCE IN A NUTSHELL.

The SMART.POINT 24 volt lighting system, based entirely on LED lighting technology, makes use of the smaller volumes of the lamps and combines the smallest possible dimensions with the greatest possible degree of flexibility. Regardless of whether it's installed surface mounted onto the ceiling or recessed into it – the system technology, almost invisible to the observer, allows for the maximum creative freedom with minimal energy consumption.

The luminaires can be integrated into the common Casambi and HomeMatic smart home systems using SMART.IQ wireless components for digital lighting control. Combinations with controllable single luminaires lead to further lighting design options for smart homes.

A DALI converter also allows for integration into digitally controllable lighting systems for professional lighting control.

SMART.POINT emphasises brilliant decorative and lighting technology features. It is recommended for use in private living space as well as in public and commercial areas. The system can be individually configured for any lighting requirements imaginable.

SMART.POINT SIMPLY INSTALL

INSTALLATION flush with the ceiling

INSTALLATION Surface mounted on the ceiling

SOCKET with SMART.IQ WIRELESS ADAPTER

INSTALL QUICKLY AND SAFELY

The installation of the 24 v LED system luminaires is extremely easy. Thanks to the plug connection, the luminaires can be put into operation quickly and conveniently.

Once plugged into the three-pole socket, the luminaire is mechanically secured against detaching by the ridged sleeve. At the same time, precise swivelling is thus ensured for the system spotlights.

THE SMART.POINT MOUNTING METHODS

The SMART.POINT 24 V system is suitable for the following mounting methods:

- Recessed installation with external switching power supply in suspended ceilings
- Surface-mounted variant in the form of a ceiling canopy with integrated switching power supply

WIRELESS MODULE FOR LIGHTING CONTROL

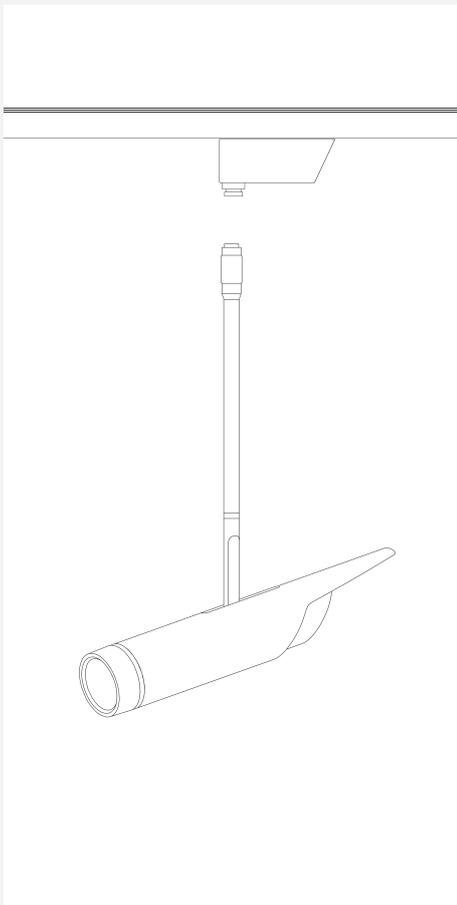

The SMART.IQ wireless module, which is easy to integrate retroactively, brings intelligence into play. In the blink of an eye, the 24 volt LED point outlet system is transformed into a smart home solution.

The SMART.IQ wireless module is simply connected through the plug socket. During commissioning of the system, the spotlight is coupled with the mobile device and establishes a wireless connection.

SHOP

EXPANDABLE AT ANY TIME

Thanks to the flexible pin connection, the luminaires in the SMART.POINT 24 V system range can also be used in other luminaire systems from OLIGO.

With the help of the appropriate three-pole system adapter, integration into both the SMART.TRACK 24 V LED track system and the PHASE 230 V track system, as well as into the SHOP modular recessed luminaire system, is possible.

SMART.IQ

in combination with the Casambi wireless solution

SIMPLY CLEVER

Casambi is a free software for the mobile control of single luminaires and lighting systems.

It is characterised by:

- easy integration
- simply technical design
- wireless installation, and
- intuitive control via smartphone or tablet

Even existing lighting units and conventional light switches can be integrated into the mobile lighting control system using a switch module which can be retrofitted. Casambi is therefore particularly suitable for retrofitting in existing buildings.

Thanks to a maximum distance of 50 metres between the modules or the mobile device used as a control, even bigger projects can be realised.

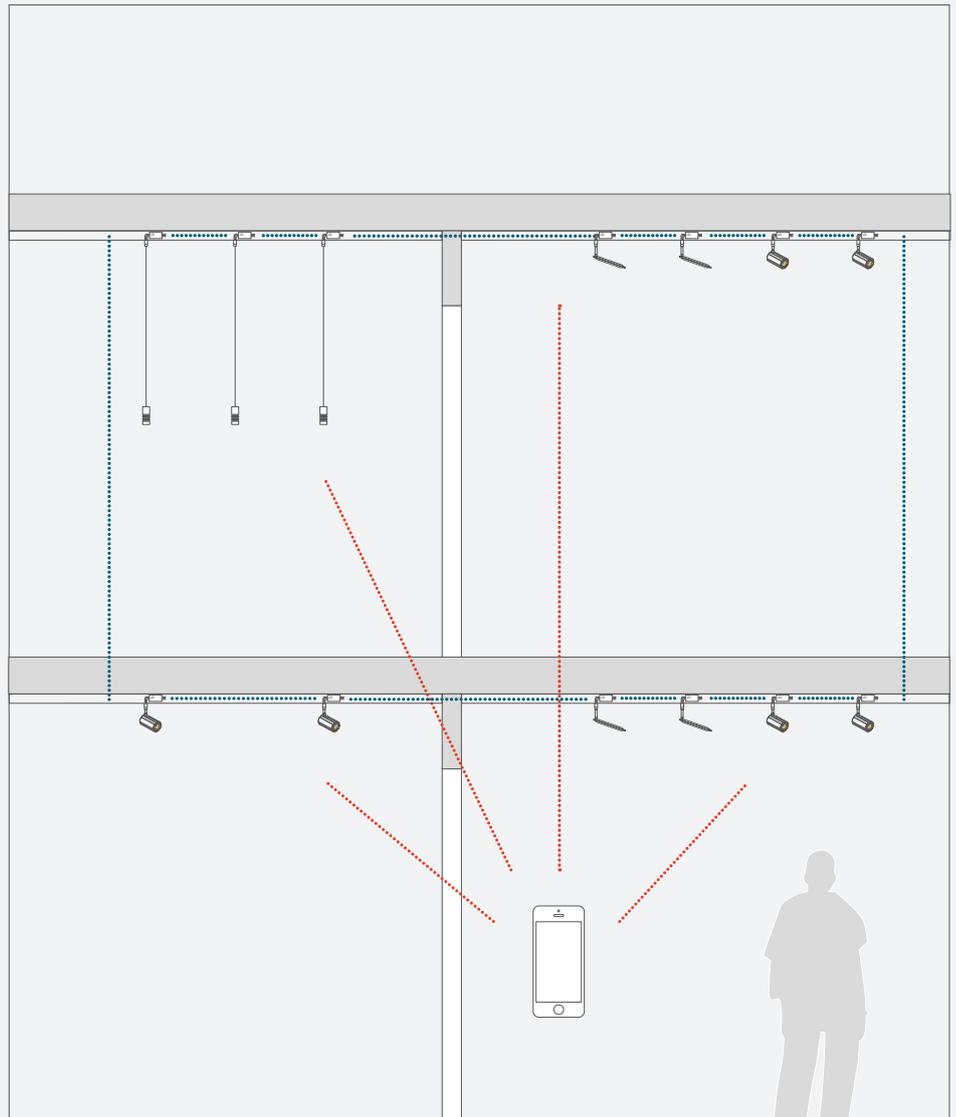

PROVEN TIME AND AGAIN

The software is used by more than 120 companies in the lighting industry and is compatible with products in the Philips Hue range, among others.

It therefore offers end users a convenient, cross-manufacturer lighting control system with just one app.

Detailed information about Casambi can be found at

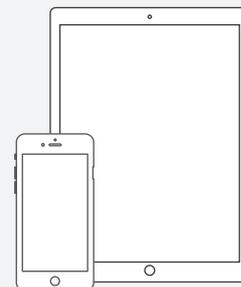

➔ www.casambi.com

Mobile devices

SMART.IQ

in combination with the HomeMatic home control system

SMART HOME VIA WIRELESS

HomeMatic is a cross-system smart home system for wireless intelligent building control. It is available for retrofitting in the home as well as for new builds.

The various connected devices such as blinds and heating, access control, security alarm and weather sensors can be conveniently controlled using a smartphone or tablet, via a built-in centre, by remote control or using the PC software.

The HomeMatic wireless protocol is based on the 868 MHz frequency range. It offers excellent wireless range and has no interference from WiFi or Bluetooth. The wireless signal is secured against external tampering using the AES-128 security technology.

AT HOME AND OUT AND ABOUT

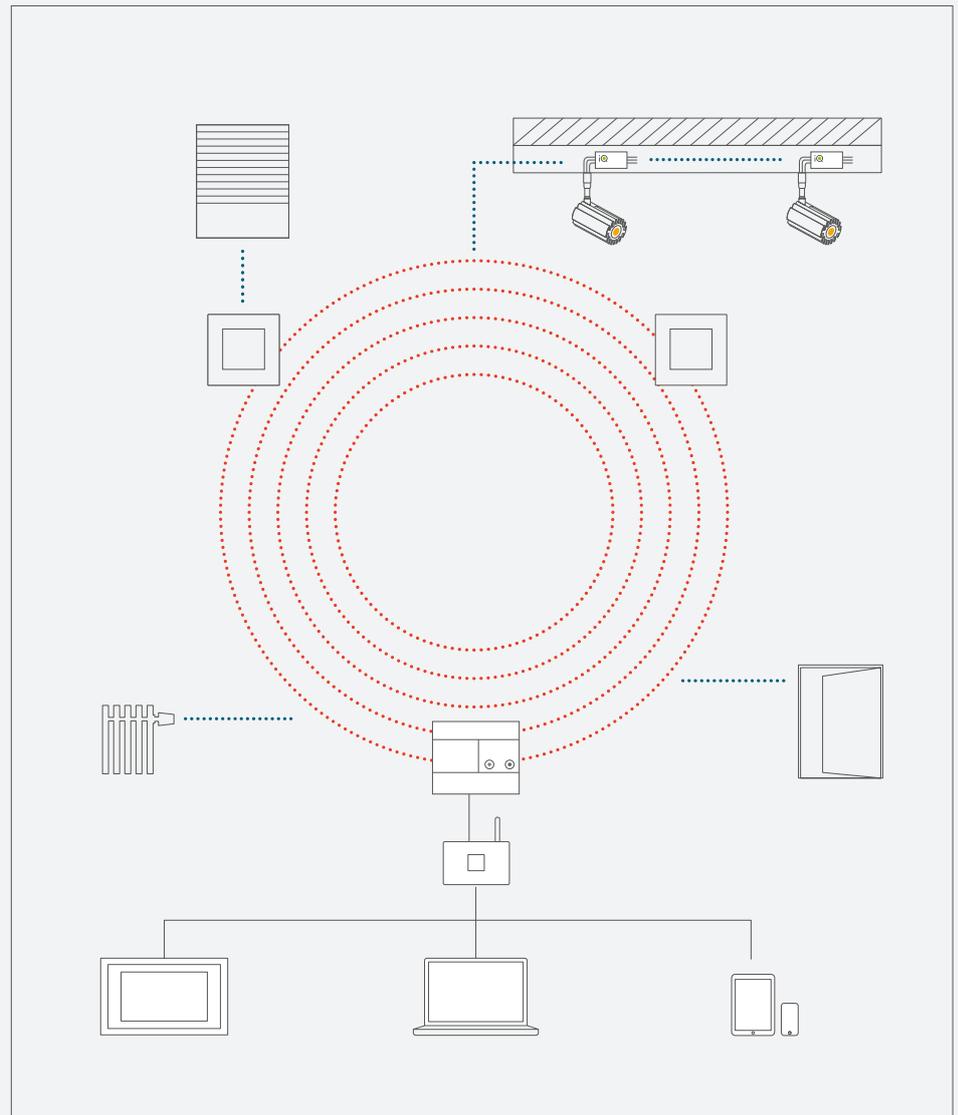

The HomeMatic user interface can be set up using a web browser-based interface and can be controlled both in the local network and over the Internet.

ONE STANDARD, MANY PARTNERS

Thanks to its open interfaces, the system allows for the development of partner solutions in the field of hardware and software. These include, among other things, apps and Cloud services for control via smartphone and tablets which are offered directly by the partners.

Detailed information about HomeMatic can be found at

WALKER

LED

The bright WALKER reflector spotlight convinces with a luminous flux of 1,850 lumen and, thanks to the three-pole pin, is suitable for digital lighting control systems. With two light distribution characteristics and modern design, WALKER puts the topic of luminaire design in a contemporary context and is perfectly suited for designing creative shop fitting and office concepts.

NEWTON

LED

With a 1,850 lumen luminous flux at a power consumption of 17.8 watts, NEWTON offers a bright, efficient lighting solution for product presentation. The high performance reflector, coordinated in-house with the LED light source shields the spotlight and at the same time defines the softly sketched light scene. The rotatable and swivelling spotlight, with light distribution characteristics of 25° and 45° and light colours of up to 4,000 K, allows for a multitude of options for the modulation of presentation areas.

SENTRY PRO

LED

The SENTRY PRO LED spotlight is businesslike in form, impressive in output. The cylindrical luminaire body, made from aluminium, surrounds a 1,350 lumen LED and is connected to the adapter by a joint which tilts and swivels. Reflectors optimised for the spotlight allow for a particularly homogeneous light mix.

SENTRY PRO is particularly suitable for professional use in the retail sector, in galleries and exhibitions and in combination with modern architecture.

A LITTLE BIT MORE LED

The A LITTLE BIT MORE LED spotlight offers outstanding lighting technology with individually definable light distribution characteristics. With a luminous flux of 1,000 and up to 4,000 kelvin, the spotlight is intended for use in shops and property. The beam angle can be continuously adjusted between 20° and 60° using the focusable glass lens. For harmonious light distribution, the high quality lens body is finished separately with a micro texture on the inside.

A LITTLE BIT LED

The A LITTLE BIT LED spotlight is slightly smaller in terms of size and light output, but just as variable when it comes to the light scene. Like its big brother, A LITTLE BIT also has efficient LED lighting technology. The width of the cone of light can be continuously adjusted between 20° and 60°. Different rod lengths allow for different distances from the ceiling. A system pendant luminaire matching this spotlight design is also available.

HUBBLE

LED

The HUBBLE LED spotlight is a suitable inspiration if high quality materials and an elegant appearance are required. The rotatable and swivelling spotlight can also be aligned as a downlight in a harmonious extension of its blade. The beam angle can be set as desired between 20° and 50° thanks to the manually adjustable focus. HUBBLE is available with light colours of 2,700 or 3,000 kelvin and is suitable for use in living space and property.

KELVEEN

LED

A striking feature of KELVEEN is the high quality glass lens which is available with two beam angles as a spotlight (40°) or floodlight (90°). In combination with the freely movable luminaire head, KELVEEN can be individually adjusted to suit the actual lighting requirements.

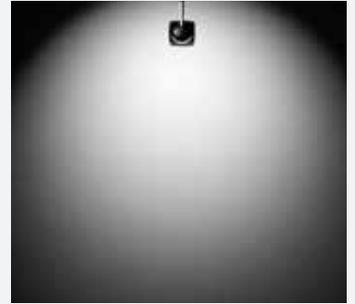

The lighting effect can be creatively expanded using dichroic filters which can be inserted.

41 DEGREES

LED

41 DEGREES is an extraordinary room light which redefines the design of light sources for extensive room lighting. It stands out with its clear, geometric shape. The flat luminaire body rests weightlessly as a concentric circular ring in the room. Its soft, warm white silhouette from the inner surface of the ring disseminates a pleasantly cosy lighting mood.

FLAVIA

LED

Like a suspended work of art made of light, FLAVIA magically draws the eye. Thanks to the optionally open or closed prismatic lens, the actual light source remains invisible and the result is the impression of a glowing forest of leaves. With varying light colours of 2,700 and 3,000 kelvin, the delicate FLAVIA can be used both in private living space and in property.

GRACE

GRACE

LED-Neuheit

The timeless GRACE luminaire is considered to be one of the classic decorative pendant luminaires worldwide. The luminaire is ideal for setting the scene at tables and counters. The two lenticular, satin finished shades ensure even, glare-free illumination.

If the luminaire is integrated into a SMART.IQ or DALI application then the digital lighting control replaces the individual lighting control via gesture.

Design: Ralf Keferstein

DECENT

LED

DECENT is a flat, subtle LED pendant luminaire in the form of a disc. The evenly flat light radiating downwards is perfectly suited to lighting dining tables or counters. DECENT is controlled touchlessly. A memory function stores the last brightness value selected.

If the luminaire is integrated into a SMART.IQ or DALI application then the digital lighting control replaces the individual lighting control via gesture.

A LITTLE BIT LED

The A LITTLE BIT pendant luminaire offers a highly flexible lighting solution. The elegant luminaire head made from aluminium integrates a lens which can be focused between 20° and 60°. Elegant surfaces made from polished or matt aluminium round out the luminaire profile of A LITTLE BIT. For harmonious light distribution, the high quality lens body has been finished separately with a texture on the inside. The pendant luminaire design is also available as a spotlight for track installation.

PHASE

PERFORMANCE IS THE NAME OF THE GAME HERE.

PHASE is a three-phase 230 volt track system with a functional design. The high quality aluminium profile track is primarily used for straight line lighting concepts. Thanks to the multitude of combination possibilities for pooled or flat lighting of surfaces and objects to be highlighted, PHASE is particularly recommended for use in the retail sector, in public buildings and conferences, and in galleries and sacred buildings.

PHASE system luminaires are offered with a variety of lighting technologies. Both LED and halogen luminaires are available to choose from.

Both 24 volt and 12 volt OLIGO system luminaires can be used in existing track systems in the Euro format thanks to the SMART.POINT or PLUG-IN adapter.

Through configuration to the adapter, the luminaires are allocated to the individual circuits and allow for the design of a variety of light scenes.

The 24 volt SMART.POINT luminaires can also be integrated into a centrally controllable lighting system using a DALI-compatible adapter.

PHASE

VERSATILE OPPORTUNITIES

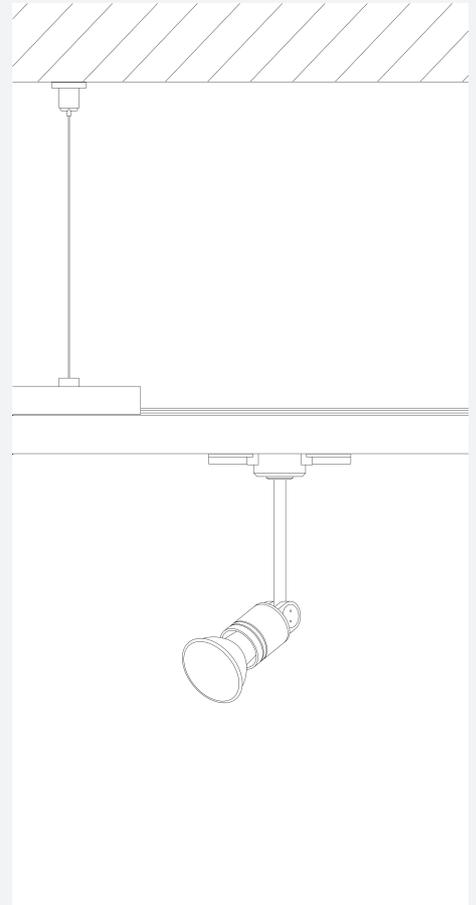

INSTALLATION
flush with the ceiling

INSTALLATION
with supports

INSTALLATION
suspended

INSTALLATION OPTIONS

PHASE is a tried and tested, high performance 230 volt track system which is based on track components from Eutrac.

The 5-cable surface mounted track for three circuits comprises an extruded aluminium profile and two PVC support profiles with two embedded 2.5 mm²

copper cables each, three separate switchable circuits, protective earth through the aluminium profile. On-site length adjustment can be done with no problem through simple sawing.

There is no need to cut back or bend the copper cable. The track has pre-punched

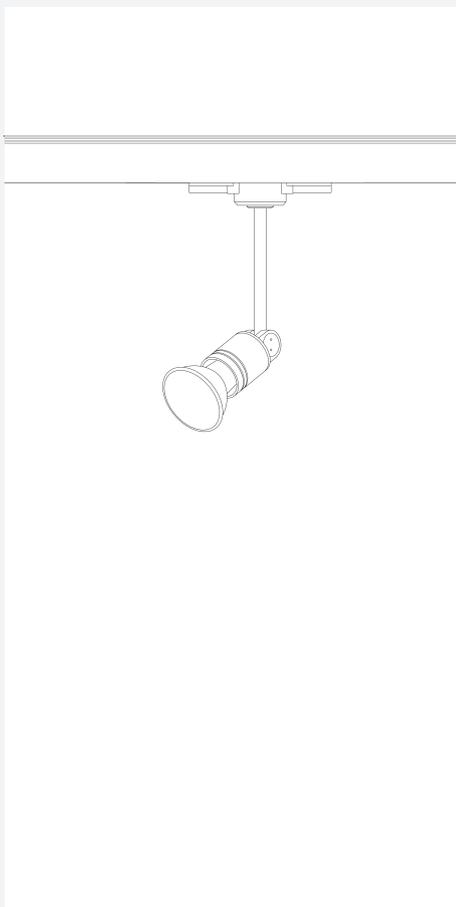

mounting slots and is approved for use within arm's reach.

PHASE can be installed flush to the ceiling, with a distance support and in suspended form. In particular, installation flush with the ceiling creates a homogeneous transition from the ceiling to the lighting system.

PLUG-IN

LARGE SELECTION OF LUMINAIRES

PHASE system luminaires are equipped with a fixed universal three-phase adapter in the factory. The luminaires are attached to the busbar by means of clamp fastening and can be repositioned in just a few simple steps.

Using a system adapter, the entire selection of SMART.POINT 24 volt system luminaires is available to choose from.

An adapter with DALI converter is also available for integration of the SMART.POINT 24 volt system luminaires into a centrally controllable lighting system.

Likewise, PLUG-IN 12 volt system luminaires can be integrated into the system with no problem using the PHASE-IN adapter.

DALI

DIGITAL LIGHTING CONTROL USING WIRED COMPONENTS

TRIED AND TESTED INTERFACE STANDARD

DALI is a tried and tested international interface standard for digital lighting control. It lends itself to use for professional lighting control in commercial and public spaces.

A poleable two-wire cable which can simply be laid with the normal power supply is sufficient for installation. The open interface standard defines bidirectional communication between control units and up to 64 individual addressable electrical operating units, from any manufacturer. It is thus possible to configure scalable lighting systems.

INTEGRATION INTO BUILDING TECHNOLOGY

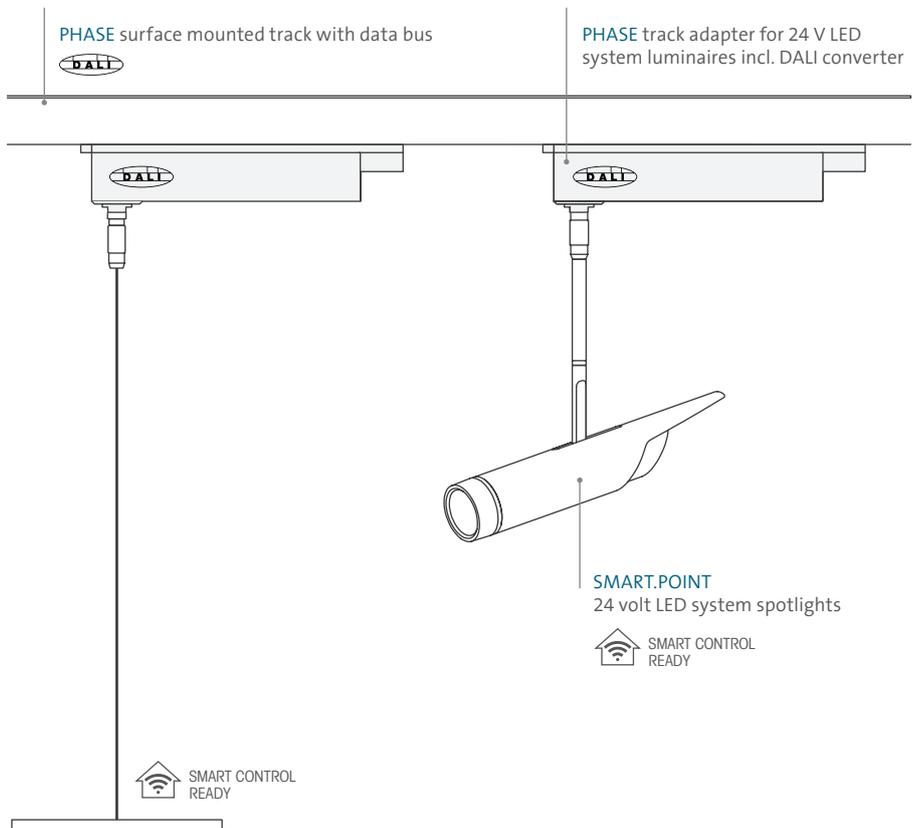

The system allows for extensive configuration modifications without having to subsequently interfere with the existing electrical installation. Complex lighting scenarios, such as test, status and maintenance queries, can likewise be realised using DALI.

In addition, integration of the lighting control system into higher building management systems is also possible.

Detailed information about DALI can be found at

➔ www.dali-ag.org

DALI lighting control

FLEXIBLE INDIVIDUAL OR GROUP CONTROL

24 volt LED system luminaires with DALI interfaces can be addressed flexible, i.e. they can be controlled individually but can also belong to one or more groups. In addition, there is clearly increased functionality since they are able, among other things, to save information for various light scenes or reach target dimming values at the same time as all other devices.

A crucial advantage for planning results from the possibility of assigning light groups independently of the wiring. In a new build, all cables can therefore be laid in the ceiling even if the exact floor plan has not yet been defined.

If a floor plan is subsequently changed then the light groups simply need to be reconfigured in the system.

LIGHT SCENES

Pre-programmed lighting moods in which many different luminaires complement each other to produce an overall look can be called up with the touch of a finger. Effects can also be part of light scenes, so that not only static but also dynamic lighting moods can be created.

WALKER

LED

The bright WALKER reflector spotlight convinces with a luminous flux of 1,850 lumen and, thanks to the three-pole pin, is suitable for digital lighting control systems. With two light distribution characteristics and modern design, WALKER puts the topic of luminaire design in a contemporary context and is perfectly suited for designing creative shop fitting and office concepts.

NEWTON

LED

With a 1,850 lumen luminous flux at a power consumption of 17.8 watts, NEWTON offers a bright, efficient lighting solution for product presentation. The high performance reflector, coordinated in-house with the LED light source shields the spotlight and at the same time defines the softly sketched light scene.

The rotatable and swivelling spotlight, with light distribution characteristics of 25° and 45° and light colours of up to 4,000 K, allows for a multitude of options for the modulation of presentation areas.

TWIN LANE

TWIN LANE

Circular shapes and a symmetrical base structure define the design of the TWIN LANE spotlight. The spotlight heads are gimbal-mounted so that almost any point in the room can be lit. Alongside the modest shapes, the luminaire offers high operational reliability since the thermal separation between the luminaire head and the upstream transformer has been taken into account in a separate housing. TWIN LANE is suitable for the use of LED retrofits and fulfils the current requirements for an energy-saving lighting solution.

HIGH STREAM 16 / GRACE

HIGH STREAM 16

The design of the HIGH STREAM 16 looks both dynamic and elegant. The elaborately manufactured luminaire head made from aluminium surrounds the halogen lamp and gives the luminaire an aesthetic design. Fine surfaces in bright chrome or matt chrome round out the optical merits of HIGH STREAM 16. There is a subtle spike on the underside which can be used to adjust the luminaire, even during use.

41 DEGREES

LED

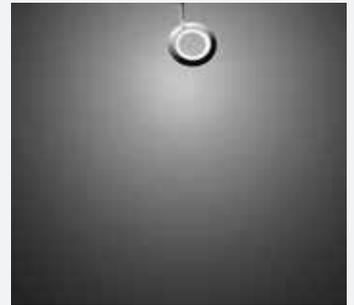

41 DEGREES is an extraordinary room light which redefines the design of light sources for extensive room lighting. It stands out with its clear, geometric shape. The flat luminaire body rests weightlessly as a concentric circular ring in the room. Its soft, warm white silhouette from the inner surface of the ring disseminates a pleasantly cosy lighting mood.

FLAVIA

LED

Like a suspended work of art made of light, FLAVIA magically draws the eye. Thanks to the optionally open or closed prismatic lens, the actual light source remains invisible and the result is the impression of a glowing forest of leaves. With light colours of 2,700 and 3,000 kelvin, the delicate FLAVIA can be used both in private living space and in property.

DECENT

DECENT

LED

DECENT is a flat, subtle LED pendant luminaire in the form of a disc. The evenly flat light radiating downwards is perfectly suited to lighting dining tables or counters. DECENT is controlled touchlessly. A memory function stores the last brightness value selected.

If the luminaire is integrated into a DALI application then the digital lighting control replaces the individual lighting control via gesture.

A LITTLE BIT

A LITTLE BIT LED

The A LITTLE BIT pendant luminaire offers a highly flexible lighting solution. The elegant luminaire head made from aluminium integrates a lens which can be focused between 20° and 60°. Elegant surfaces made from polished or matt aluminium round out the luminaire profile of A LITTLE BIT. For harmonious light distribution, the high quality lens body has been finished separately with a texture on the inside. The pendant luminaire design is also available as a spot-light for track installation.

LUMINAIRE ADAPTER

for SMART.POINT 24 V luminaires / DALI control

The luminaire adapter with integrated switching power supply allows for the integration of three-pole point luminaires from the OLIGO SMART.POINT system into the PHASE track system. In this manner, it is possible to benefit from the lighting technology benefits of the LED-based 24 volt technology in Eutrac track systems operated with mains voltage.

Additionally, an adapter with DALI converter is also available for integration into a centrally controllable lighting system.

FEATURES

System adapter
For integration of 24 V SMART.POINT luminaires into the PHASE track system and other Eutrac systems based on 230 V

Lighting control and dimming
Optionally with DALI converter for integration into building automation systems

Output data
230 V / 50-60 Hz / 24 V DC / 30 VA

PHASE-IN

Luminaire adapter for 12 V point luminaires

PHASE-IN is an unobtrusive adapter with integrated transformer and socket for 12 V PLUG-IN luminaires. With the adapter, all point luminaires can be integrated into the PHASE track system. On the one hand, this opens up additional design versatility, and on the other hand the lighting technology benefits of the 12 V luminaires can be used with the mains voltage operated PHASE.

FEATURES

System adapter

For integration of 12 V PLUG-IN luminaires into the PHASE track system and other Eutrac systems based on 230 V

CHECK-IN

230 VOLTS IN A COMPACT DESIGN.

CHECK-IN is a slim, single-phase 230 volt track system with which lighting concepts in straight lines, elegant curves or circles can be realised.

The patented and award-winning system consists of a high-strength aluminium profile and an extensive range of luminaires. With dimensions of 22 x 8 millimetres, it is among the smallest of its type in the world and stands out with clear, minimalist design language.

A variety of lighting technologies make CHECK-IN as usable in private living space as it is in the retail sector and property.

For individual curved track configurations and circles, the tracks are curved in the factory upon request by the customer.

CHECK-IN

SIMPLY INSTALL

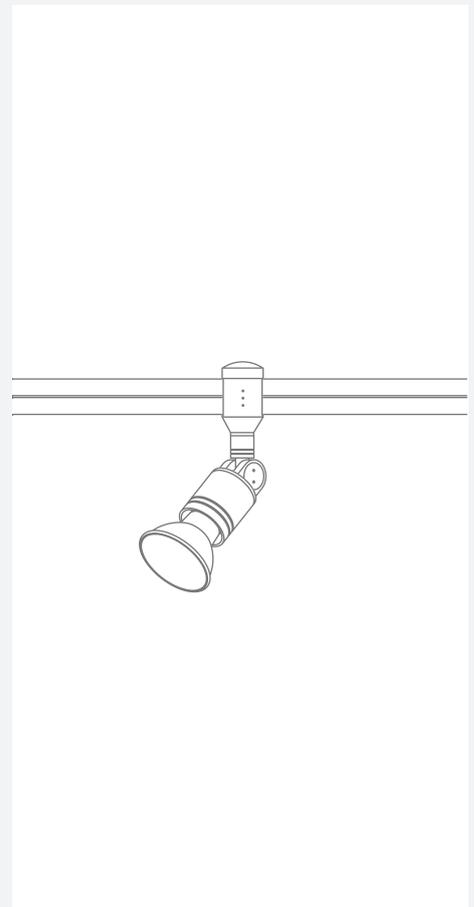

INSTALLATION
with supports

INSTALLATION
suspended

ADAPTER
Integrated

INSTALLATION OPTIONS

CHECK-IN is easy to install. The tracks and luminaires can be installed almost entirely without tools with very little effort. The tracks can easily be shortened on site.

An extensive range of distance supports and cable suspensions allows for different forms of ceiling installation.

Creative solutions can likewise be realised for shelf and image lighting using a wall support and associated gallery spotlights.

EXPANDABLE AT ANY TIME

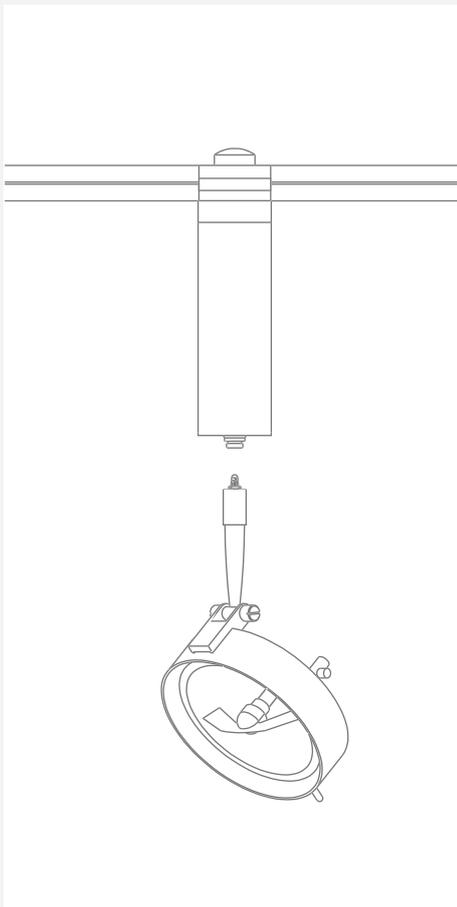

CHECK-IN system luminaires are equipped with an adapter in the factory.

The track system can be flexibly expanded, and at the same time the choice of luminaires is not limited to the CHECK-IN system range.

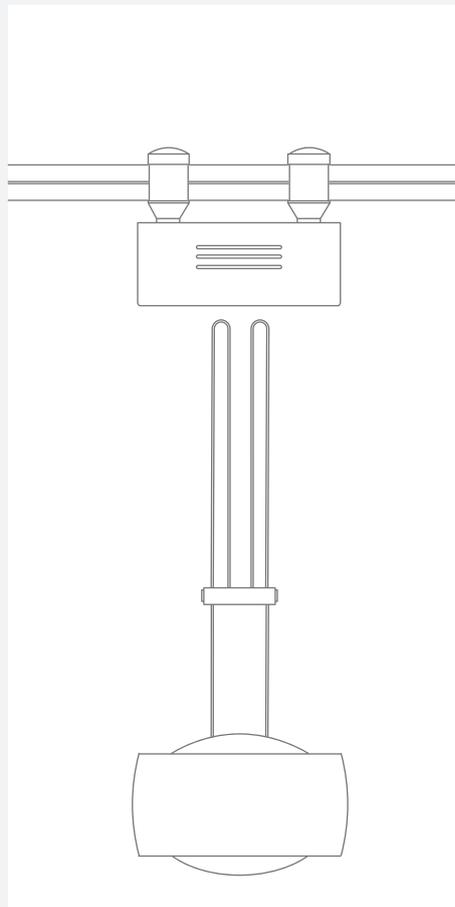

CHECK-IN

COMBINING AND EXPANDING

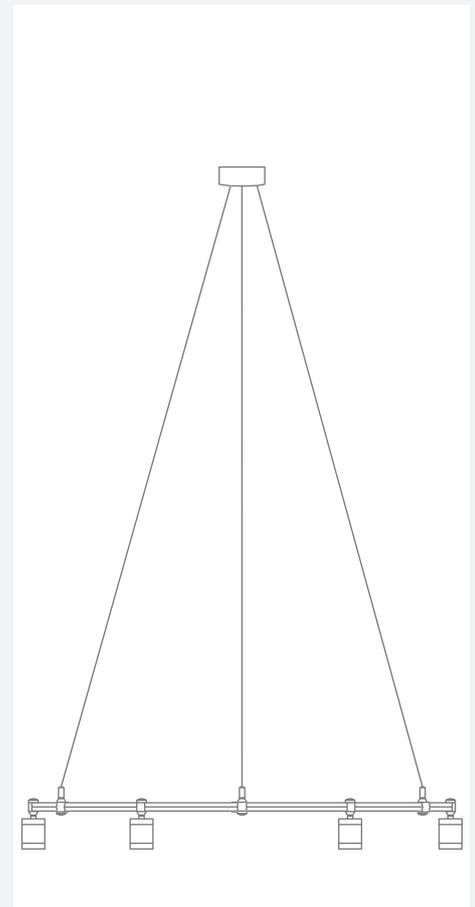

ADAPTER
12 V plug connection system

ADAPTER
12 V pendant luminaire
HEIGHT ADJUSTMENT

LIGHT OBJECT
CHECK-IN track circle
BEAUTY FREE

With the CONTACT TUBE adapter, all 12 V PLUG-IN luminaires can be integrated into the CHECK-IN track system. On the one hand, this opens up additional design versatility, and on the other the lighting technology benefits of the 12 V lamps can be used with the mains voltage operated CHECK-IN. As well as the version with electrical transformer, an adapter with a switching power supply opens up the possibility of integrating LED luminaires into the track system.

For individual expansion, height adjustable 12 V pendant luminaires can be integrated into the system with no problem using the KEEP ON ROLLING adapter.

Owing to their delicate dimensions, CHECK-IN tracks can be bent into individual curves or circles.

BEAUTY FREE track circles with varying diameters can be fabricated in single or multiple suspension and represent a lighting solution which is as subtle as it is solemn.

WALLEY

LED novelty

A minimalist design and structure and impressive lighting performance make this spotlight truly special. The two spotlight heads in the 2-flame variant can be pointed towards each other, which means two different areas can be illuminated simultaneously from one mounting point. The luminaires can be dimmed externally using many of the latest phase-cut dimmers.

TWIN LANE

TWIN LANE

Circular shapes and a symmetrical base structure define the design of the TWIN LANE spotlight. The spotlight heads are gimbal-mounted so that almost any point in the room can be lit. Alongside the modest shape, the luminaire offers high operational reliability since the thermal separation between the luminaire head and the upstream transformer has been taken into account in a separate housing. TWIN LANE is suitable for the use of LED retrofits and fulfils the current requirements for an energy-saving lighting solution.

HIGH STREAM 16

The design of the HIGH STREAM 16 looks both dynamic and elegant. The elaborately manufactured luminaire head made from aluminium surrounds the halogen lamp and gives the luminaire an aesthetic design. Fine surfaces in bright chrome or matt chrome round out the optical merits of HIGH STREAM 16. There is a subtle spike on the underside which can be used to adjust the luminaire, even during use.

GATE B EIGHT

MUSTERHAUS STREIF

GATE B EIGHT

The GATE B EIGHT spotlight is particularly suitable for use in large volume light sculptures, such as free floating circles or squares, for example. The cylindrical luminaire head made from aluminium provides selective downward lighting. A smaller proportion of light shines upwards and traces a soft point of light on the ceiling. GATE B EIGHT is suitable for the use of LED retrofits.

Typical applications

BALINO

BALINO

Hand-blown crystal glass forms the luminaire body of the small, spherical BALINO pendant luminaire. In the satin finish and orange models, the glass body is solidly coloured. For the tobacco and gold colours, the exclusive finishing with a crystal ice pattern on the interior of the lampshade creates a unique texture. Brilliant illumination highlights the charming lighting effect of this high quality pendant luminaire, which is available with a variety of shades.

GRACE

GRACE

LED novelty

The timeless GRACE luminaire is considered to be one of the classic decorative pendant luminaires worldwide. The luminaire is ideal for setting the scene at tables and counters. The two lenticular, satin finished shades ensure even, glare-free illumination. The luminaires can be dimmed externally using many of the latest phase-cut dimmers.

GATE B SEVEN GALERIE

GATE B SEVEN GALERIE

GATE B SEVEN GALERIE is particularly suitable for installation on a wall track and optimally lights items or pictures in the area underneath. The spotlight presents itself as an elegant detail which effectively stages the object without intruding on the overall appearance. The spotlight is suitable for the use of LED retrofits and fulfils the current requirements for an energy-saving lighting solution. The appearance and light scene can be varied using decorative rings and other accessories, available separately.

KEEP ON ROLLING

Luminaire adapter for 12 V pendant luminaires with height adjustment

With the integrated transformer, the system adapter reduces the mains voltage to 12 V and connects the height adjustable pendant luminaires with the CHECK-IN system. Adjustable spacing pulleys connect the suspension cables for the various pendant luminaires. The adapter is available in two dimmable models. An electronic transformer with touch dimmer allows pendant luminaires to be dimmed by touching the cable.

Design: Ralf Keferstein

FEATURES

System adapter
For integration of 12 V pendant luminaires with height adjustment

CONTACT TUBE

Luminaire adapter for 12 V point luminaires

CONTACTTUBE is an adapter with integrated transformer and socket for 12 V PLUG-IN luminaires. With the adapter, all 12 V point luminaires can be integrated into the CHECK-IN track system. On the one hand, this opens up additional design versatility, and on the other the lighting technology benefits of the 12 V lamps can be used with the mains voltage operated CHECK-IN.

As well as the version with electronic transformer (AC), a model with switching power supply (DC) is also available. It opens up the possibility of integrating LED luminaires and spotlights into the track system.

Design: OLIGO

FEATURES

System adapter

BEAUTY FREE

for the CHECK-IN track system

BEAUTY FREE is a light object which can be put together individually from the system components in the CHECK-IN track system: modern technology and classic design language come together here in elegant unity.

Fundamentally, each BEAUTY FREE consists of a BASIC ceiling housing with the suspensions, the track circle and the luminaires. The BASIC ceiling housing is suitable for light objects with a diameter of between 1,100 and 4,790 millimetres.

When putting the BEAUTY FREE components together, attention should be paid to a balanced weight distribution. OLIGO is happy to undertake the individual planning for you.

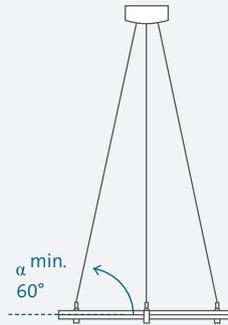

Design: Ralf Keferstein

BEAUTY FREE Components

for the CHECK-IN track system

The number of suspensions technically required is based on the desired diameter of the track circle. One track segment should always be supported by one suspension, so the number of tracks and suspensions is always identical. The minimum length of the cable suspension is determined depending on the diameter of the full track circle used.

Number of BASIC required	1	1	1	1
Number of SUSPENSION/2 required	-	1	2	3
Minimum length of cable suspension	750 mm	1100 mm	1450 mm	1800 mm

During planning, please take care to ensure that the angle between the track circle and the suspension is not smaller than 60°.

BEAUTY FREE COMPONENTS

BASE COMPONENT CHECKLIST

- A Track
- B Support / suspension
- C Connector
- D Power supply
- E End pieces / end caps

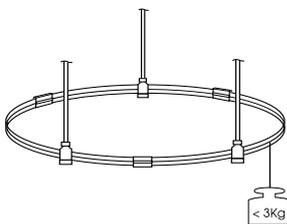

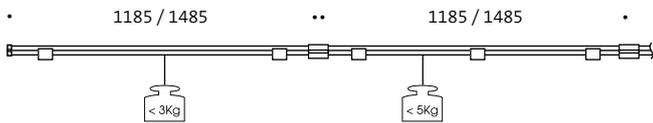

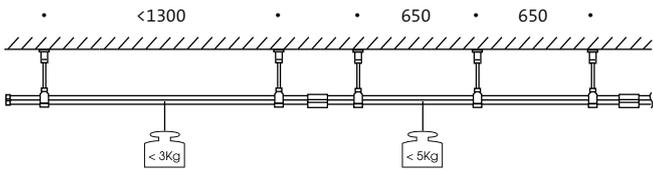

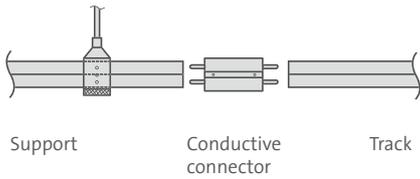

SPECIFIC COMPONENTS

- F Track arm
- Picture mounting

When planning the track system, there is a choice between two technically and stylistically differing support systems (TYPE A and TYPE B).

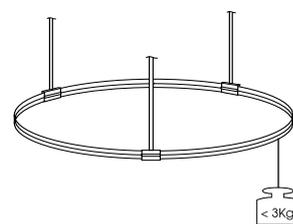

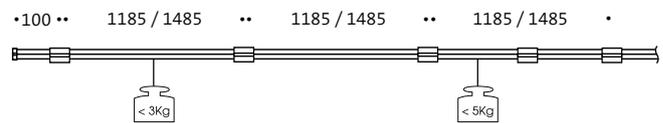

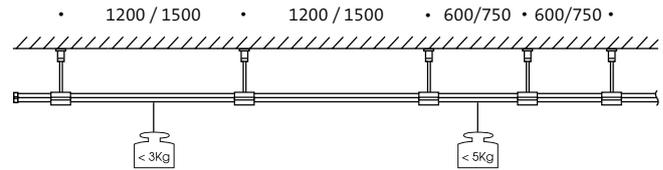

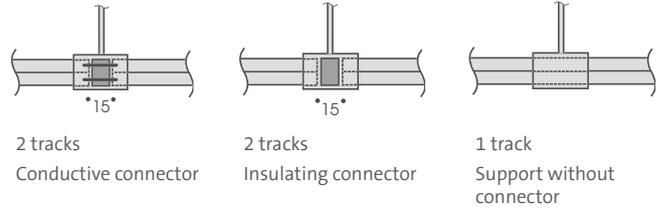

SYSTEM SUPPORT TYPE A

The TYPE A support system is characterised by the functional separation of track support and track connector. A track can be hung in the support at any point. A separate connection is required at another point:

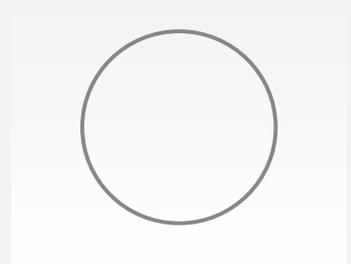

SYSTEM SUPPORT TYPE B

For the TYPE B system, the support and track connector form a unit. Fundamentally, they are divided into three different functional types:

1. TRACK

1.1 STRAIGHT

READY FOR TAKE OFF

SMALL IS BEAUTIFUL.

READY FOR TAKE OFF is a graceful, single-phase 12 volt track system with spirit. Whether it's flat or high spaces, straight line or curved track configurations, or even circles: READY FOR TAKE OFF adapts to your requirements.

With dimensions of 17 x 8 millimetres, the robust rectangular shaped busbar is discreetly dimensioned. Thanks to track connectors and supports designed in-house, the track elements can be connected to one another almost invisibly.

READY FOR TAKE OFF luminaires are offered with a variety of lighting technologies. The user is free to choose between LED or halogen luminaires.

The high quality track system is technically perfectly suited to private living space and is likewise tried and tested for presentable accent lighting in sophisticated retail and in galleries. READY FOR TAKE OFF can be extended and modified at any time.

For individual curved track configurations, the tracks can be curved in the factory upon request.

READY FOR TAKE OFF A SYSTEM WITH THE BEST CONTACTS

INSTALLATION
with supports

INSTALLATION
suspended

INSTALL QUICKLY AND SAFELY

All system components can be combined without virtually any tools in a very simple manner. The interior track connectors are equipped with spring cage contacts. They are pushed into the track conduit during installation and make the connection between the track elements almost invisible. The luminaire adapter spanning the tracks is

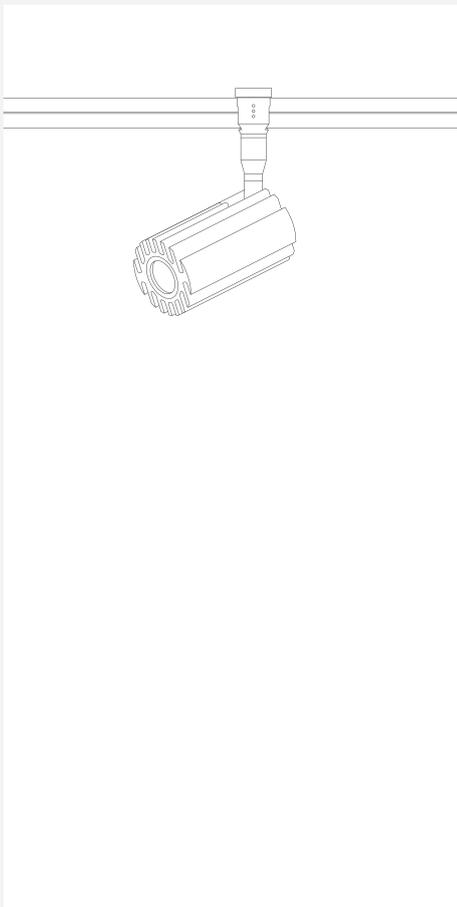

equipped with a spring pressure mechanism for the best contact pressure. It is mechanically secured against release with a ridged cap.

Creative solutions can likewise be realised for shelf and image lighting using a wall support and associated gallery spotlights.

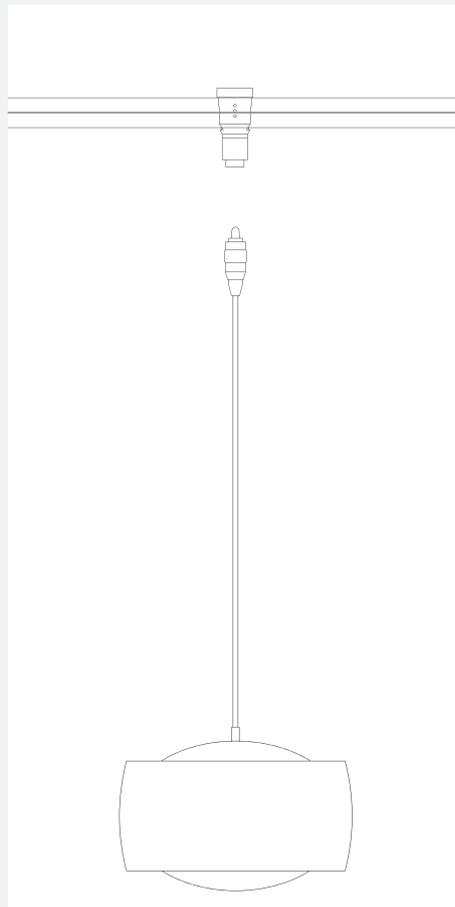

READY FOR TAKE OFF

COMBINING AND EXPANDING

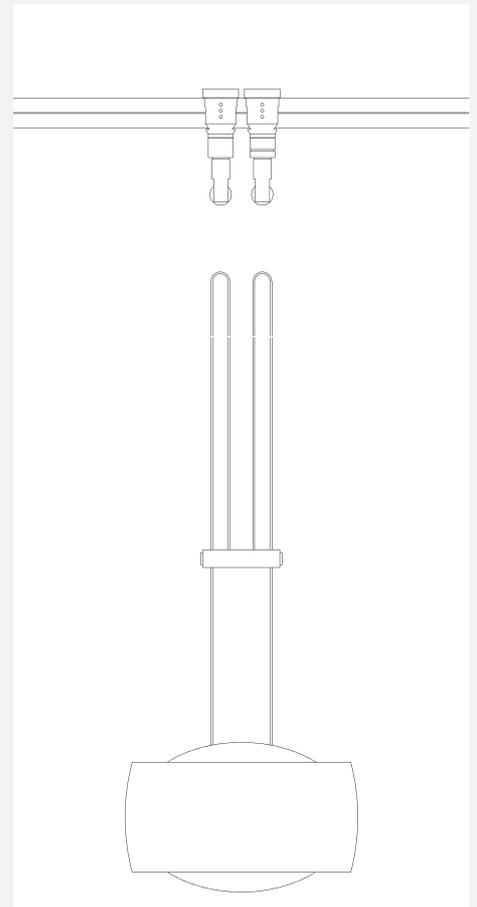

ADAPTER
integrated

ADAPTER
12 V plug connection system
PLUG-IN

ADAPTER
12 V pendant luminaire
HEIGHT ADJUSTMENT

EXPANDABLE AT ANY TIME

READY FOR TAKE OFF system luminaires leave the factory with a fixed adapter.

The track system can be flexibly expanded, and at the same time the choice of luminaires is not limited to the READY FOR TAKE OFF system range.

Using a special adapter, all 12 volt PLUG-IN system luminaires can be integrated into the track system.

Height adjustable 12 V pendant luminaires can also be integrated into the track system without a problem using an adapter.

RIDGE MAX

RIDGE MAX

LED

A distinctive heat sink with cooling ribs around the circumference characterises the design of the highly efficient RIDGE MAX LED spotlight. The luminaire head, made from aluminium, surrounds the 1,100 lumen LED and is connected to the adapter by a joint which tilts and swivels. The matt black and matt chrome surfaces have a remarkable surface finish thanks to an intricate grinding pattern.

A LITTLE BIT

LED

The A LITTLE BIT LED spotlight is slightly smaller in terms of size and light output, but just as variable when it comes to the light scene. Like its big brother, A LITTLE BIT also has efficient LED lighting technology, the qualities of which can be determined by means of a continuously adjustable lens. Different rod lengths also allow for different distances from the ceiling. A pendant luminaire matching this design is also available.

TORINO

TORINO

The TORINO gallery spotlight is developed for wall mounting and optimally lights objects or pictures in the area underneath it. The delicate, curved arm gives the spotlight a particularly lightweight look. TORINO is suitable for the use of LED retrofits and fulfils the current requirements for an energy-saving lighting solution. The appearance and light scene of TORINO can be varied using decorative rings and other accessories, available separately.

SEVEN MILES FINAL / A LITTLE BIT

SEVEN MILES FINAL

The SEVEN MILES FINAL designer housing is a canopy for ceiling or wall mounting. Two integrated adapters support and connect the busbar. A complete single luminaire consists of housing with an integrated transformer or switching power supply, as well as a track and the desired luminaires.

All luminaires in the READY FOR TAKE OFF track system can be individually combined with SEVEN MILES FINAL. For combination with pendant luminaires, an appropriate adapter must be ordered separately (see page 311).

Design: Ralf Keferstein

SEVEN MILES FINAL COMPONENTS

PULLEY-TO

Luminaire adapter for 12 V pendant luminaires with height adjustment

PULLEY-TO connects height adjustable low voltage pendant luminaires to the READY FOR TAKE OFF track system. Adjustable spacing pulleys connect the suspension cables for the various pendant luminaires. The luminaires are protected by a 5A/T fuse located in the adapter.

Design: Ralf Keferstein

FEATURES

Material
Metal

TECHNICAL INFORMATION

The net weight of the luminaires may require the use of additional track supports.

READY-IN

Luminaire adapter for 12 V point luminaires

READY-IN is an adapter with integrated socket for all 12 V PLUG-IN point luminaires. This adapter provides additional design variety, in particular with regard to the integration of 12 V pendant luminaires into the track system. Suitable coaxial pendant luminaires as well as other spotlights can be found in the 12 V PLUG-IN chapter.

READY FOR TAKE OFF SYSTEM COMPONENTS

12 V / max. 25 A

The components in a track system vary according to the situation in which it is used and the customer's individual requirements. A functional system always consists of certain base components.

The following checklist facilitates checking the completeness of the system and serves as a guideline for choosing the right components.

Examples

SYSTEM COLOURS

-  Chrome
-  Matt chrome

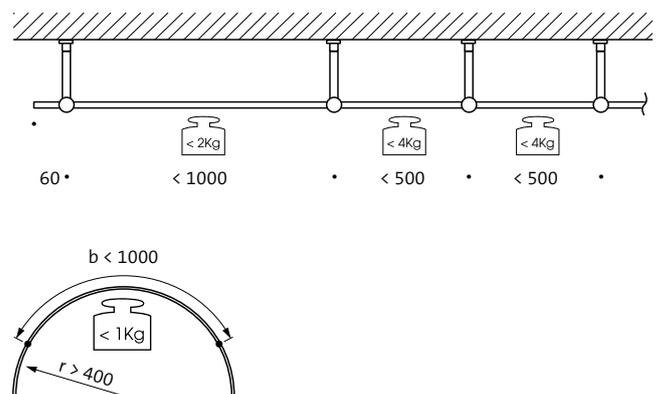

BASE COMPONENT CHECKLIST

- A Track
- B Support / suspension
- C Connector

CONNECT

PLUG-IN

INDIVIDUAL WISHES INCLUDED.

PLUG-IN is a delicate, versatile 12 V plug connector system. Much like the principle of plug and plug socket, the PLUG-IN luminaires are connected to the corresponding plug sockets. The plug connection can be detached at any time and allows for combination of the luminaires any way you like.

Depending on the installation situation and planned electrical installation, the system offers a wide variety of optical possibilities. High quality designer housing is intended for surface mounted installation. With an integrated transformer and up to five plug-in slots, the housing allows for the individual combination of single luminaires.

Plug sockets for recessed installation in suspended ceilings offer the option of designing individually tailored lighting concepts. PLUG-IN luminaires are offered with a variety of lighting technologies. Both LED and halogen luminaires are available to choose from.

The PLUG-IN system creates decorative accents and is recommended for use both in private living space and for the shop and property sector. It can be individually configured for any lighting requirements imaginable.

PLUG-IN

ONE SYSTEM, MANY OPTIONS

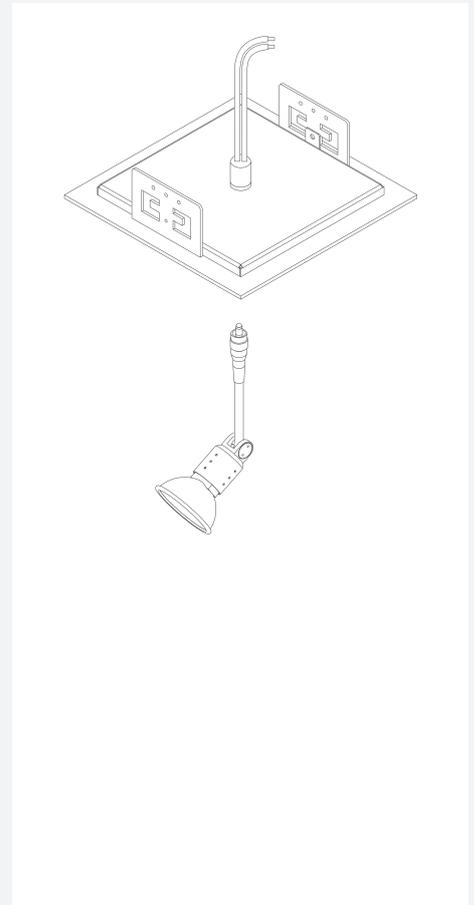

INSTALLATION recessed in the ceiling

INSTALLATION Surface mounted

ADAPTERS Recessed system [SHOP](#)

INSTALL QUICKLY AND SAFELY

The installation of PLUG-IN luminaires is remarkably simple. Thanks to the plug connection, the luminaires can be put into operation quickly and conveniently.

Once plugged into the two-pole socket, the luminaire is mechanically secured against detaching by the ridged sleeve. At the same time, precise swivelling is thus ensured for the system spotlights.

THE PLUG-IN INSTALLATION METHODS

Depending on the area of application, there are two installation methods:

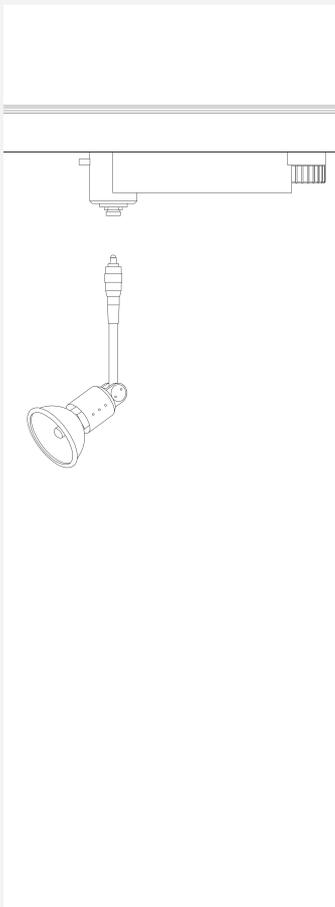

- Recessed installation with external transformer in suspended ceilings / cavity walls
- Surface mounted variant in the form of a ceiling canopy with integrated transformer on wall or ceiling surfaces.

The coaxial cable provided in the factory for pendant luminaires is always two metres long and can be shortened at the plug as you wish.

12 V cable system
LIGHT-LINE

COMBINING PLUG-IN LUMINAIRES WITH HIGH VOLTAGE SYSTEMS

The luminaire range from the 12 V PLUG-IN system can be combined with a wide range of other OLIGO track and cable systems using a variety of adapter technology. The luminaires can be integrated into high voltage track systems using the PHASE-IN and CONTACT-TUBE adapter systems.

COMBINING PLUG-IN LUMINAIRES WITH LOW VOLTAGE SYSTEMS

The READY-IN and LIGHT-IN adapters allow for combination with the delicate 12 volt track and cable systems from OLIGO.

RIDGE MAX

LED

The distinctive cooling ribs around the circumference characterise the design of the highly efficient RIDGE MAX LED spotlight. The luminaire head, made from aluminium, surrounds the 1,200 lumen LED and is connected to the adapter by a joint which tilts and swivels. There are two light distribution characteristics available to choose from for lighting planning. The black and matt chrome surfaces have a remarkable surface finish thanks to an intricate grinding pattern.

RIDGE

LED

The RIDGE LED spotlight is a little more delicate than its big brother. The high quality luminaire head made from aluminium has the same rotating and tilting functionality. With a luminous flux of 360 lumen, RIDGE is ideal for universal use in private living spaces, for example in studies, hallways or modern living and dining rooms. For RIDGE too, the black and matt chrome surfaces are refined with an intricate grinding pattern.

A LITTLE BIT with Socket IN-B

A LITTLE BIT with Socket IN-B

A LITTLE BIT MORE LED

The A LITTLE BIT MORE LED spotlight offers outstanding lighting technology with individually definable light distribution characteristics. With a luminous flux of 1,100 lumen and 3,500 kelvin, the spotlight is intended for use in shops and property. The beam angle can be continuously adjusted between 20° and 60° using the focusable glass lens. For harmonious light distribution, the high quality lens body has been finished separately with a texture on the inside.

A LITTLE BIT

LED

The A LITTLE BIT LED spotlight is slightly smaller in terms of size and light output, but just as variable when it comes to the light scene. Like its big brother, A LITTLE BIT also has efficient LED lighting technology, the qualities of which can be determined by means of a continuously adjustable lens. Different rod lengths also allow for different distances from the ceiling. A pendant luminaire matching this spotlight design is also available.

LIGHT-LINE

LIGHT LIGHTS.

LIGHT-LINE is a delicate 12 volt cable system and a veritable all-rounder. It fits into any architecture with ease, and is a flexible problem solver particularly in historic buildings and private old buildings.

With a gauge of 110 millimetres, rooms are spanned subtly and with a dedicated function. The copper cable allows the system to fade into the background and sets the stage for the light.

The range of luminaires comprises timeless classic spotlights and artfully designed light objects.

Equipped with high performance low voltage lamps, LIGHT-LINE can be used as an application-oriented lighting solution, as a creative lighting concept in private living space or as a sleek looking lighting solution.

VARIOUS FORMS OF INSTALLATION

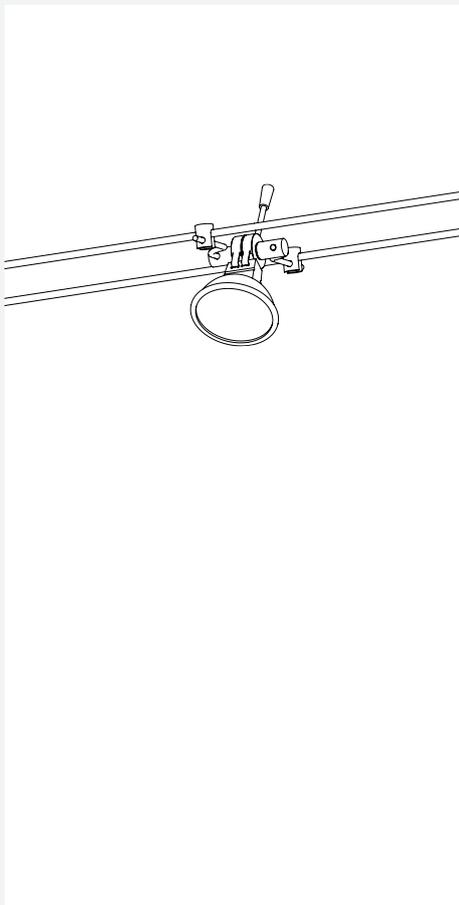

LIGHT-LINE is a cable system that can be used flexibly, which offers strong lighting solutions even in challenging room situations. LIGHT-LINE can be installed across corners and in sloping roofs. Crossing cable configurations or shapes are also possible.

The extensive range, consisting of cable tensioners, connectors, supports and pulleys, opens up an extraordinary variety of possible solutions.

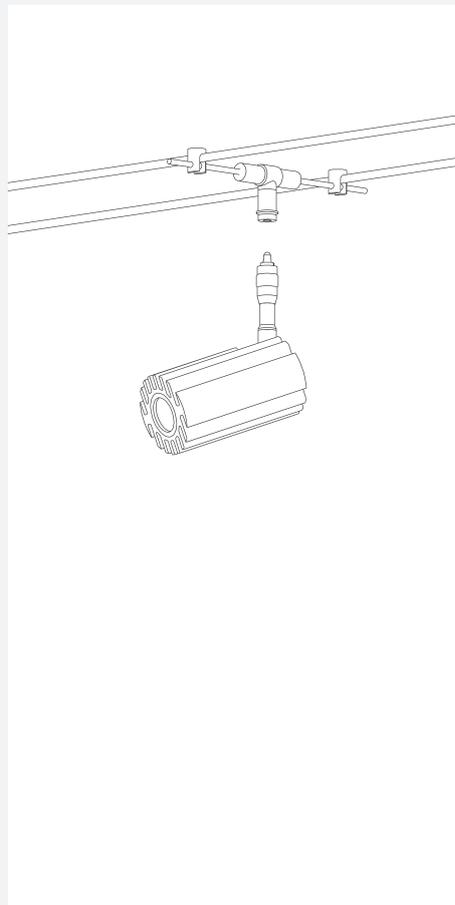

LIGHT-LINE

COMBINING AND EXPANDING

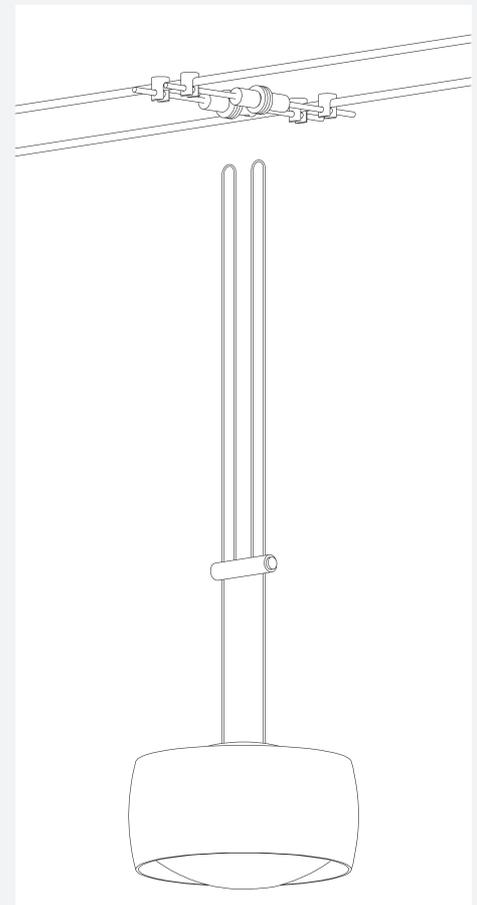

ADAPTER
integrated

ADAPTER
12 V pendant luminaire
HEIGHT ADJUSTMENT

EXPANDABLE AT ANY TIME

LIGHT-LINE system luminaires are equipped with a fixed adapter in the factory.

The cable system can be flexibly expanded, and at the same time the choice of luminaires is not limited to the LIGHT-LINE system range.

Using the LIGHT-IN adapter, the full selection of PLUG-IN 12 V system luminaires can be integrated into the cable system.

In addition, the height adjustable 12 V pendant luminaires can be integrated into the cable system without a problem using the PULLEY-LL adapter.

GALERIE

GALERIE

The curved adapter rods offset the fitting of the GALLERY spotlight parallel to the cable guide, giving it its elegant appearance. The chrome-plated spike with black protective cap allows the spotlight to be adjusted while switched on. GALLERY is suitable for the use of high performance halogen lamps and energy-efficient LED retrofits. The appearance and light scene can be varied using decorative rings and other accessories, available separately.

GRACE

GRACE

Height adjustable

Timeless GRACE numbers among the classics of decorative pendant luminaires worldwide. The two lenticular, satin finished shades are surrounded by a luminaire head made from aluminium and ensure even, glare-free illumination. The adjustable stay subtly integrated into the suspension allows for continuous height adjustment of the luminaire. The luminaire is integrated into the cable system with the help of the PULLEY-LL adapter.

SHOP

THE RECESSED SYSTEM WITH MAXIMUM VERSATILITY.

SHOP is an innovative and at the same time modular recessed luminaire system which was designed for flexible use in 12 volt, 24 volt and 230 volt technologies. The system offers a variety of luminaire units which each consist of a frame (FRAME) and an electrical unit (MOD). A multitude of highly efficient spotlights and lamps from the OLIGO range can be used with the MOD and can be freely chosen from and exchanged according to the lighting task. The variety of combinations offer a multitude of possibilities for planners and decision-makers in the design of professional lighting solutions.

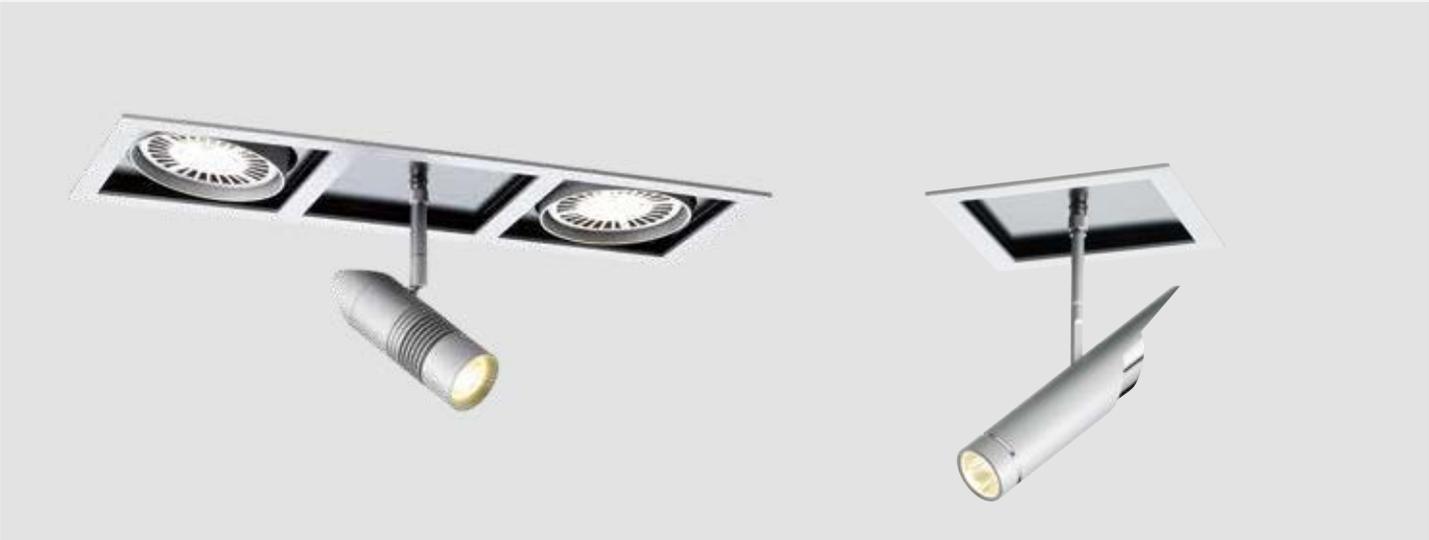

For retail, SHOP allows for selective lighting quality in the shop window and entrance area, in retail areas and in the staging of display cases and shelves.

The simple design of more effective lighting moods opens up and inviting ambience and, at the same time, optimal presentation of goods. According to the lighting technology required, LED spotlights, LED retrofit lamps and even halogen lamps can be used in SHOP. The modular system can be converted at any time by changing the components.

The FRAME is optionally available in decorative chrome, matt silver or white. As well as staging shopping worlds, SHOP can also be used for the sophisticated living room.

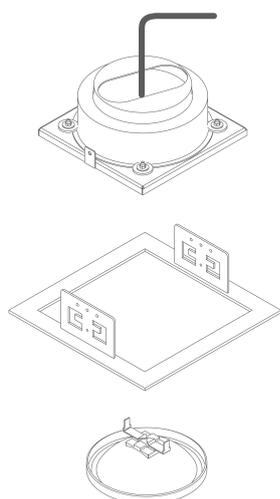

Design: Ralf Keferstein

COMBINING AND EXPANDING

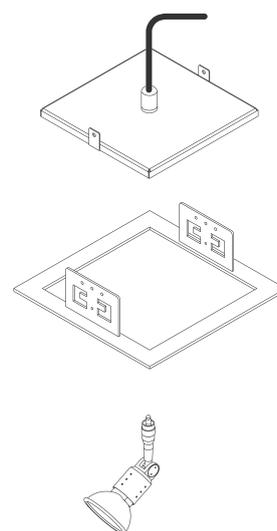

SPOTLIGHTS with gimballed suspension

SMART.POINT 24 V SPOT SYSTEM adapter

PLUG-IN 12 V SPOT SYSTEM adapter

MOD 1 is designed to accept gimbal mounted recessed spotlights. Various lamps such as LED retrofits or halogen reflector lamps can be used.

MOD 3 / 24 V allows for the connection of any 24 volt LED spotlights from the SMART.POINT system. In combination with a DALI converter, these can be integrated into a DALI-compatible lighting system.

Alternatively, the lighting can be integrated into a system with wireless lighting control via Casambi or HomeMatic using SMART.IQ components. More information about the SMART.IQ wireless module can be found from page 120.

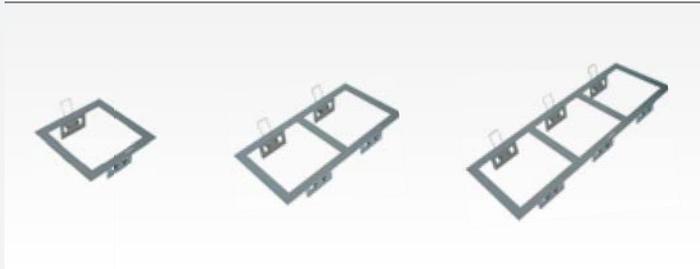

All luminaires from the PLUG-IN system can be adapted using MOD 3 / 12 V. This solution is particularly suitable for use in private living space.

SHOP with MOD 1, MOD 3 / 24 V and HUBBLE

12 VOLT LED-RETROFIT

Energy-efficient low voltage lamp

LED READY

Quality lamp from a well-known brand manufacturer.

Retrofit lamps are only compatible with lamp accessories (e.g. decorative rings) to a limited extent.

Reliable dimming of retrofit lamps is dependent on the actual transformer/dimmer combination and should be checked on a case by case basis.

Length: 48 mm

Equivalent to GU 5.3 / QR-C 51

V	W	K	lm	Beam angle	Dimmable	CRI	EEC	Service life (h)	Item number
12	6	2,700	380	40°	no	>80	A+	50,000	61-122-12-06

Compatible with decorative rings. Suitable for magnetic transformers and DC power supply units (12 V DC).

Length: 56 mm

Equivalent to G 53 / QR-LP 111

12 DC	12.5	2,700	735	36°	yes	>80	A	25,000	61-124-14-06

Suitable for DC power supply units (12 V DC).

12 VOLT IRC

Energy-efficient low voltage halogen lamp

IRC READY

Quality lamp from a well-known brand manufacturer.

Dimmable with phase cut-off dimmers (dimmer "type C") or phase cut-on dimmers (dimmer "type L") or universal dimmers (dimmer type "R, L, C").

IRC lamps offer the same light output as standard lamps but with lower energy consumption. Conventional lamps can generally be replaced with IRC lamps with a lower wattage.

Examples:

75 W conventional -> 50 W IRC 50 W conventional -> 35 W IRC 35 W conventional -> 25 W IRC

230 VOLT ECO

Energy-efficient high voltage halogen lamp

ECO READY

Quality lamp from a well-known brand manufacturer.

Dimmable with phase cut-off dimmers (dimmer "type C") or phase cut-on dimmers (dimmer "type L") or universal dimmers (dimmer type "R, L, C").

ECO lamps offer a particularly high light output per watt and thus better energy efficiency than conventional lamps of the same type.

ENEC, VDE

VA	Size (mm)	Item number
20-105	150 x 70 x 36	60-114-10-23

1.6 ET 7 TOUCH

230 V / 50-60 Hz / 12 V
Electronic transformer, with touch dimmer
Permissible secondary side cable length <2 m
Protection class 2

2-cable system

VA	Size (mm)	Item number
35-60	144 x 45 x 34 mm	60-115-10-23
35-105	144 x 45 x 34 mm	60-115-11-23

1. TRANSFORMERS

1.7 MT 1

230 V / 50-60 Hz / 12 V
Magnetic transformer
Compatible with dimmer "Type L"
Protection class 2

300 mm primary cable and glass fuse

Certificates
ENEC

VA	Size (mm)	Item number
105	108 x 78 x 80	60-101-10-21
150	130 x 85 x 80	60-101-11-21
200	130 x 85 x 100	60-101-12-21
300	130 x 85 x 100	60-101-13-21
400	175 x 128 x 118	60-101-14-21

2. POWER INDUCTOR

230 V / 50-60 Hz
For reducing dimmer noise
Compatible with magnetic transformers / MT 1

A	Size (mm)	Item number
max. 1.5	Ø 52 x 26	60-301-10-23

3. SWITCHING POWER SUPPLIES

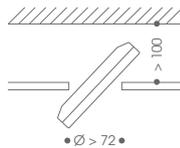

3.1 DC 1

100-240 V / 50-60 Hz / 12 V DC
With functional earthing

Screw terminals with terminal covers

Certificates
ENEC

VA	Size (mm)	Item number
45	182 x 62 x 35	60-211-11-21
60	182 x 62 x 35	60-211-12-21

3.2 DC 2

100-240 V / 50-60 Hz / 24 V DC
Protection class 1
IP 65

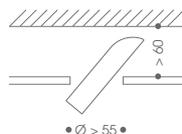

VA	Size (mm)	Item number
60	171 x 62 x 37	60-211-20-06
120	220 x 68 x 39	60-211-21-06
240	244 x 68 x 39	60-211-22-06

3. SWITCHING POWER SUPPLIES

3.3 DC 3

110-240 V / 50 Hz / universal
 Constant current 350/700/1050 mA
 Constant current 10 V DC max. 10 W
 Constant current 12 V DC max. 12 W
 Constant current 24 V DC max. 20 W
 Protection class 2

Screw terminals with terminal covers

Certificates
 ENEC

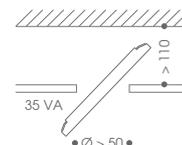

VA	Size (mm)	Item number
20	110 x 52 x 24	60-211-10-21

3.4 DC 4

100-277 V / 50-60 Hz / 24V DC /
 Protection class 2

Plug terminals with terminal covers

Certificates
 ENEC

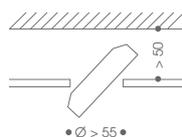

VA	Size (mm)	Item number
3.5 - 35	220 x 40 x 21	60-211-23-21
4.8 - 60	250 x 40 x 21	60-211-24-21

3. SWITCHING POWER SUPPLIES

3.5 LED DRIVER, CONSTANT CURRENT

220-240 V / 50-60 Hz / 300 mA Konstantstrom /
 26-43 V DC / 7,8 - 12,9 W / U_{max} 58 V
 Dimmable with phase-cut dimmers
 Protection class 2

Plug terminals with terminal covers

Certificates
 ENEC

W	Size (mm)	Item number
7,8 - 12,9	86 x 41 x 22	60-211-30-10

4. LED ROTARY DIMMER / WALL

DIMMER INSERT / SET

Busch Jaeger 6523 U-102
 LED dimmer UP insert
 With rotary actuation, pressure sequence toggle switch and soft detent
 Rated voltage: 230 V~, + 10 % / - 10 %
 Rated frequency: 50 Hz/60 Hz
 Rated output: 2 - 100 W/VA

Busch Jaeger 1721-184K
 Single cover frame, colour: Studio white
 80 x 80 x 11 mm

Busch Jaeger 6540-84-102
 Central slide with rotary knob and glow lamp, colour: Studio white
 63 x 63 mm

Type	Item number
Dimmer insert	60-671-00-00
Set: dimmer insert with rotary knob and cover frame	60-625-00-00

THE OLIGO ITEM NUMBERS

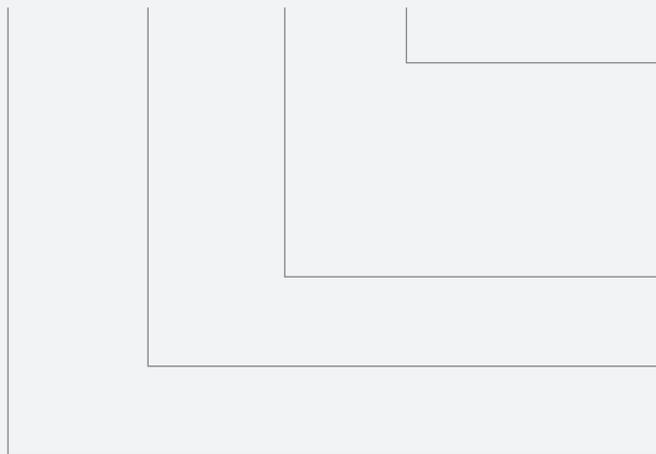

With the OLIGO item number system, you can order even more easily. Each item number comprises four blocks of numbers. The blocks of numbers stand for functions, product families, variants and colour key. By means of the number combination, you can clearly see whether a plan is consistent and coherent with regard to system, luminaire family, surface and colour.

Operating features such as gesture control or touch dimmers are indicated by letters at the beginning of the item number.

This system applies for all products in the OLIGO range.

AN EXAMPLE OF THE SYSTEM

20 - 862 - 13 - 21

The number sequence in this item number indicates the SMART.POINT 24 V WALKER spotlight in matt white.

Primary colour

05 = chrome, 06 = matt chrome, 07 = leaf silver, etc.
20 = bright white, 21 = matt white,
22 = bright black, 23 = matt black, etc.
A shade colour is separated from the primary colour by an oblique stroke.

Indication of luminaire-specific features,
e.g. the type of reflector

Family identification
e.g. 862 = WALKER, 898 = A LITTLE BIT, etc.

System or function indication
20 = 24 V SMART.POINT, 30 = CHECK-IN, etc.

Letters to indicate an operating function are placed before the item number: T = touch dimmer,
G = gesture control D = integrated DALI converter

ORDERING INFORMATION AND TECHNICAL INFORMATION

ORDERS

Unless otherwise specified, luminaires are always supplied without lamps. Accessories should always be ordered separately.

Products from OLIGO should only be acquired from our specialist retail and wholesale trade partners. A retailer overview can be found at www.oligo.de.

All previous brochures become invalid with the publication of this catalogue. In case of doubt, the order date applies for the aforementioned effectiveness.

All offers are non-binding and only take effect with our written confirmation on the basis of our T&C. Verbal agreements require written confirmation.

For special models of our products, please contact our customer service department.

TECHNICAL INFORMATION

LIGHT VALUES

For luminaires with integrated LEDs, all lumen information comprises actual measures values at operating temperature for the luminaire. Nominal information from the LED manufacturer is up to 20% higher.

SURFACES, COLOURS AND MATERIALS

All information regarding surfaces are merely colour information and do not specify material designation.

Matt metal surfaces are either varnished, anodised or galvanised. Bright metal surfaces are either polished or galvanised.

Shades are generally satin finished on the outside and reflection coated on the inside. Some shades are hand-blown and hand crafted single unit products with individual character. Small differences are unavoidable.

PROTECTION CLASS

Unless otherwise, luminaires are always technically designed according to protection class IP 20. All transformers and power supply units have safety extra-low voltage (SELV).

LAMPS

Information regarding lamps complies with the ZVEI [Central Association of the Electrical and Electronics Industry] lamp designation system (LBS).

Subject to technical modifications. No liability shall be accepted to the accuracy of technical information or for colour differences.

KEY

LED INTEGRIERT

Luminaires with integrated LED technology. The LED lamps in these luminaires can only be changed by the manufacturer.

LED READY

This symbol indicates the compatibility of luminaire and lamp. The thermal and mechanical usability of the LED retrofit lamps recommended in this catalogue has been tested.

IRC READY

Luminaires marked with this symbol can be fitted with energy-efficient low voltage halogen lamps.

ECO READY

Luminaires marked with this symbol can be fitted with energy-efficient high voltage halogen lamps.

ESL READY

Luminaires marked with this symbol can be fitted with energy-saving lamps.

System component can be integrated into a DALI system.

SMART CONTROL
READY

Special accessories allow the luminaire to be integrated into, and controlled by, a smart-home system or building automation system.

DIMMER
SWITCH

Luminaire comes with a dimmer switch for dimming and switching the luminaire on and off.

GESTURE
CONTROL

Luminaire is equipped with a sensor for touch-free gesture control (switching and dimming).

TYPICAL UNITS OF MEASUREMENT AND ABBREVIATIONS

cd	=	Candela
lm	=	Lumen
K	=	Kelvin
CRI	=	Colour rendering index
V	=	Volt
VA	=	Volt-ampere
AC	=	Alternating current
DC	=	Direct current
Hz	=	Hertz
W	=	Watt
RAL	=	Standardised colour value
EEC	=	Energy efficiency class

ADDITIONAL INFORMATION

National and international property rights such as patents, registered designs, industrial designs or trademarks are registered for many OLIGO lighting systems and luminaires.

All information in this catalogue – particularly the illustrations – may only be reproduced with prior written authorisation.

PROTECTION CLASSES ACCORDING TO 60529 (IP = Ingress Protection)		PROTECTION CLASSES ACCORDING TO DIN 40 100 (EC Publ. 417)	
Protection against foreign substances and contact	Protection against water	Protection class 1 Exposed metal parts connected to the protective earth of the luminaire.	
IP 2x > 12 mm	IP x0 No protection	Protection class 2 Live parts are additionally insulated and cannot be touched in the event of a fault.	
IP 3x > 2.5 mm	IP x2 Droplets up to 15° to the vertical	Protection class 3 Safety extra-low voltage (SELV).	
IP 4x > 1 mm	IP x3 Spray up to 60° to the vertical		
IP 5x Protected against dust	IP x4 Spray from all directions		
IP 6x Dust-proof	IP x5 Water jet from all directions		
	IP x7 Waterproof		
Example: IP 67 = dust-proof / waterproof
